- AC Solid State Relay
- Peak switching for transformers
- Rated operational current: 10, 25 and 50 AACrms
- Non-repetitive voltage: Up to 1200 V_p
- Rated operational voltage: Up to 480 VACrms
- Input range: 4 to 32 VDC
- Insulation: OPTO (input-output) 4000 VACrms

Product Description

The peak switching relay is for switching on transformers/inductive loads in which the saturated iron core can cause severe inrush currents. The peak switching relay al-

ways switches ON at the first peak voltage in the AC sinusoidal curve after the control voltage is applied. The relay switches OFF when the current crosses zero.

Applications

Timing

Initial turn-on

The line voltage must be present at least 1 period before the input voltage is applied.

Repetitive turn-on

The input voltage must be lower than the drop out voltage limit at least 1 period before it is reapplied.

Overvoltage protection

As transformers can have varying stray inductances and stray capacitances, it is always advisable to use external overvoltage protection.
