## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

# 1 Introduction

The TVP5150A device is an ultralow power NTSC/PAL/SECAM video decoder. Available in a space saving 32-pin TQFP package, the TVP5150A decoder converts NTSC, PAL, and SECAM video signals to 8-bit ITU-R BT.656 format. Discrete syncs are also available. The optimized architecture of the TVP5150A decoder allows for ultralow-power consumption. The decoder consumes 115 mW of power in typical operation and consumes less than 1 mW in power-down mode, considerably increasing battery life in portable applications. The decoder uses just one crystal for all supported standards. The TVP5150A decoder can be programmed using an I<sup>2</sup>C serial interface. The decoder uses a 1.8-V supply for its analog and digital supplies, and a 3.3-V supply for its I/O.

The TVP5150A decoder converts baseband analog video into digital YCbCr 4:2:2 component video. Composite and S-video inputs are supported. The TVP5150A decoder includes one 9-bit analog-to-digital converter (ADC) with 2x sampling. Sampling is ITU-R BT.601 (27.0 MHz, generated from the 14.31818-MHz crystal or oscillator input) and is line-locked. The output formats can be 8-bit 4:2:2 or 8-bit ITU-R BT.656 with embedded synchronization.

The TVP5150A decoder utilizes Texas Instruments patented technology for locking to weak, noisy, or unstable signals. A Genlock/real-time control (RTC) output is generated for synchronizing downstream video encoders.

Complementary 4-line adaptive comb filtering is available for both the luma and chroma data paths to reduce both cross-luma and cross-chroma artifacts; a chroma trap filter is also available.

Video characteristics including hue, contrast, brightness, saturation, and sharpness may be programmed using the industry standard I<sup>2</sup>C serial interface. The TVP5150A decoder generates synchronization, blanking, lock, and clock signals in addition to digital video outputs. The TVP5150A decoder includes methods for advanced vertical blanking interval (VBI) data retrieval. The VBI data processor slices, parses, and performs error checking on teletext, closed caption, and other data in several formats.

The TVP5150A decoder detects copy-protected input signals according to the Macrovision™ standard and detects Type 1, 2, 3, and colorstripe pulses.

The main blocks of the TVP5150A decoder include:

- Robust sync detector
- ADC with analog processor
- Y/C separation using 4-line adaptive comb filter
- Chrominance processor
- Luminance processor
- Video clock/timing processor and power-down control
- Output formatter
- I<sup>2</sup>C interface
- VBI data processor
- Macrovision™ detection for composite and S-video

## 1.1 Features

- Accepts NTSC (M, 4.43), PAL (B, D, G, H, I, M, N), and SECAM (B, D, G, K, K1, L) video data
- Supports ITU-R BT.601 standard sampling
- High-speed 9-bit ADC
- Two composite inputs or one S-video input

Macrovision is a trademark of Macrovision Corporation.  
Other trademarks are the property of their respective owners.

- Fully differential CMOS analog preprocessing channels with clamping and automatic gain control (AGC) for best signal-to-noise (S/N) performance
- Ultralow power consumption: 115 mW typical
- 32-pin TQFP package
- Power-down mode: <1 mW
- Brightness, contrast, saturation, hue, and sharpness control through I<sup>2</sup>C
- Complementary 4-line (3-H delay) adaptive comb filters for both cross-luminance and cross-chrominance noise reduction
- Patented architecture for locking to weak, noisy, or unstable signals
- Single 14.31818-MHz crystal for all standards
- Internal phase-locked loop (PLL) for line-locked clock and sampling
- Subcarrier Genlock output for synchronizing color subcarrier of external encoder
- Standard programmable video output format:
  - ITU-R BT.656, 8-bit 4:2:2 with embedded syncs
  - 8-bit 4:2:2 with discrete syncs
- Macrovision™ copy protection detection
- Advanced programmable video output formats:
  - 2x oversampled raw VBI data during active video
  - Sliced VBI data during horizontal blanking or active video
- VBI modes supported
  - Teletext (NABTS, WST)
  - Closed-caption decode with FIFO, and extended data services (EDS)
  - Wide screen signaling, video program system, CGMS, vertical interval time code
  - Gemstar 1x/2x electronic program guide compatible mode
  - Custom configuration mode that allows the user to program the slice engine for unique VBI data signals
- Power-on reset

## 1.2 Product Family

This data manual covers three devices in the TVP5150A product family: the TVP5150APBS, the TVP5150AM1PBS, and the TVP5150AM1ZQC. The hardware for these three devices is identical. The following software changes are the differences between these two devices. For the remainder of this document, unless otherwise noted, TVP5150A refers to all three devices.

- TVP5150APBS
  - ROM version 3.21
  - SECAM is masked from the autoswitch process in the default mode of register 0x04
  - Only supports ITU-R BT656.4 timing
- TVP5150AM1PBS/TVP5150AM1ZQC
  - ROM version 4.00
  - SECAM is unmasked from the autoswitch process in the default mode of register 0x04
  - Addition of register 0x30 to select ITU-R BT656.3 or ITU-R BT656.4 timing

### 1.3 Applications

The following is a partial list of suggested applications:

- Digital television
- PDA
- Notebook PCs
- Cell phones
- Video recorder/players
- Internet appliances/web pads
- Handheld games

### 1.4 Related Products

- *TVP5146 NTSC/PAL/SECAM 4x10-Bit Digital Video Decoder With Macrovision™ Detection, YPbPr/RGB Inputs, 5-Line Comb Filter and SCART/Digital RGB Overlay Support Decoder With Robust Sync Detector, Literature Number SLES084*

## 2 Functional Description

### 2.1 Analog Front End

The TVP5150A decoder has an analog input channel that accepts two video inputs, which are ac-coupled. The decoder supports a maximum input voltage range of 0.75 V; therefore, an attenuation of one-half is needed for most input signals with a peak-to-peak variation of 1.5 V. The maximum parallel termination before the input to the device is 75  $\Omega$ . Please refer to the applications diagram in Figure 5–1 for the recommended configuration. The two analog input ports can be connected as follows:

- Two selectable composite video inputs or
- One S-video input

An internal clamping circuit restores the ac-coupled video signal to a fixed dc level.

The programmable gain amplifier (PGA) and the AGC circuit work together to make sure that the input signal is amplified sufficiently to ensure the proper input range for the ADC.

The ADC has 9 bits of resolution and runs at a maximum speed of 27 MHz. The clock input for the ADC comes from the PLL.

### 2.2 Composite Processing Block Diagram

The composite processing block processes NTSC/PAL/SECAM signals into the YCbCr color space. Figure 2–1 explains the basic architecture of this processing block.

Figure 2–1 illustrates the luminance/chrominance (Y/C) separation process in the TVP5150A decoder. The composite video is multiplied by subcarrier signals in the quadrature modulator to generate the color difference signals Cb and Cr. Cb and Cr are then low-pass (LP) filtered to achieve the desired bandwidth and to reduce crosstalk.

An adaptive 4-line comb filter separates CbCr from Y. Chroma is remodulated through another quadrature modulator and subtracted from the line-delayed composite video to generate luma. Contrast, brightness, hue, saturation, and sharpness (using the peaking filter) are programmable via I<sup>2</sup>C.

The Y/C separation is bypassed for S-video input. For S-video, the remodulation path is disabled.

### 2.3 Adaptive Comb Filtering

The 4-line comb filter can be selectively bypassed in the luma or chroma path. If the comb filter is bypassed in the luma path, then chroma notch filters are used. TI's patented adaptive 4-line comb filter algorithm reduces artifacts such as hanging dots at color boundaries and detects and properly handles false colors in high frequency luminance images such as a multiburst pattern or circle pattern.

### 2.4 Color Low-Pass Filter

In some applications, it is desirable to limit the Cb/Cr bandwidth to avoid crosstalk. This is especially true in case of video signals that have asymmetrical Cb/Cr sidebands. The color LP filters provided limit the bandwidth of the Cb/Cr signals.

Color LP filters are needed when the comb filtering turns off, due to extreme color transitions in the input image. Please refer to Section 2.20.25, *Chrominance Control #2 Register*, for the response of these filters. The filters have three options that allow three different frequency responses based on the color frequency characteristics of the input video.

Figure 2-1. Composite Processing Block Diagram

## 2.5 Luminance Processing

The luma component is derived from the composite signal by subtracting the remodulated chroma information. A line delay exists in this path to compensate for the line delay in the adaptive comb filter in the color processing chain. The luma information is then fed into the peaking circuit, which enhances the high frequency components of the signal, thus improving sharpness.

## 2.6 Chrominance Processing

For NTSC/PAL formats, the color processing begins with a quadrature demodulator. The Cb/Cr signals then pass through the gain control stage for chroma saturation adjustment. An adaptive comb filter is applied to the demodulated signals to separate chrominance and eliminate cross-chrominance artifacts. An automatic color killer circuit is also included in this block. The color killer suppresses the chroma processing when the color burst of the video signal is weak or not present. The SECAM standard is similar to PAL except for the modulation of color which is FM instead of QAM.

## 2.7 Timing Processor

The timing processor is a combination of hardware and software running in the internal microprocessor that serves to control horizontal lock to the input sync pulse edge, AGC and offset adjustment in the analog front end, vertical sync detection, and Macrovision™ detection.

## 2.8 VBI Data Processor

The TVP5150A VBI data processor (VDP) slices various data services like teletext (WST, NABTS), closed caption (CC), wide screen signaling (WSS), etc. These services are acquired by programming the VDP to enable standards in the VBI. The results are stored in a FIFO and/or registers. The teletext results are stored in a FIFO only. Table 2–1 lists a summary of the types of VBI data supported according to the video standard. It supports ITU-R BT. 601 sampling for each.

**Table 2–1. Data Types Supported by the VDP**

At powerup the host interface is required to program the VDP-configuration RAM (VDP-CRAM) contents with the lookup table (see Section 2.20.58). This is done through port address C3h. Each read from or write to this address will auto increment an internal counter to the next RAM location. To access the VDP-CRAM, the line mode registers (D0h–FCh) must be programmed with FFh to avoid a conflict with the internal microprocessor and the VDP in both writing and reading. Full field mode must also be disabled.

Available VBI lines are from line 6 to line 27 of both field 1 and field 2. Each line can be any VBI mode.

Output data is available either through the VBI-FIFO (B0h) or through dedicated registers at 90h–AFh, both of which are available through the I<sup>2</sup>C port.

## 2.9 VBI FIFO and Ancillary Data in Video Stream

Sliced VBI data can be output as ancillary data in the video stream in the ITU-R BT.656 mode. VBI data is output during the horizontal blanking period following the line from which the data was retrieved. Table 2–2 shows the header format and sequence of the ancillary data inserted into the video stream. This format is also used to store any VBI data into the FIFO. The size of FIFO is 512 bytes. Therefore, the FIFO can store up to 11 lines of teletext data with the NTSC NABTS standard.

**Table 2–2. Ancillary Data Format and Sequence**

| BYTE NO. | D7 (MSB)           | D6 | D5      | D4         | D3       | D2       | D1                 | D0 (LSB) | DESCRIPTION                |                      |  |

|          | NEP                | EP | CS[5:0] |            |          |          |                    |          | Check sum                  |                      |  |
| 4(N+2)-1 | 1                  | 0  | 0       | 0          | 0        | 0        | 0                  | 0        | Fill byte                  |                      |  |

EP: Even parity for D0–D5      NEP: Negated even parity

DID: 91h: Sliced data of VBI lines of first field  
53h: Sliced data of line 24 to end of first field  
55h: Sliced data of VBI lines of second field  
97h: Sliced data of line 24 to end of second field

SDID: This field holds the data format taken from the line mode register of the corresponding line.

NN: Number of Dwords beginning with byte 8 through 4(N+2). This value is the number of Dwords where each Dword is 4 bytes.

IDID0: Transaction video line number [7:0]

IDID1: Bit 0/1 = Transaction video line number [9:8]  
 Bit 2 = Match 2 flag  
 Bit 3 = Match 1 flag  
 Bit 4 = 1 if an error was detected in the EDC block. 0 if not.

CS: Sum of D0–D7 of DID through last data byte.

Fill byte: Fill bytes make a multiple of 4 bytes from byte 0 to last fill byte. For teletext modes, byte 8 is the sync pattern byte. Byte 9 is 1. Data (the first data byte).

## 2.10 Raw Video Data Output

The TVP5150A decoder can output raw A/D video data at 2x sampling rate for external VBI slicing. This is transmitted as an ancillary data block during the active horizontal portion of the line and during vertical blanking.

## 2.11 Output Formatter

The YCbCr digital output can be programmed as 8-bit 4:2:2 or 8-bit ITU-R BT.656 parallel interface standard.

**Table 2–3. Summary of Line Frequencies, Data Rates, and Pixel Counts**

| STANDARDS                         | HORIZONTAL<br>LINE RATE (kHz) | PIXELS PER<br>LINE | ACTIVE PIXELS<br>PER LINE | SCLK FREQUENCY<br>(MHz) |
|-----------------------------------|-------------------------------|--------------------|---------------------------|-------------------------|

## 2.12 Synchronization Signals

External (discrete) syncs are provided via the following signals:

- VSYNC (vertical sync)
- FID/VLK (field indicator or vertical lock indicator)
- GPCL/VBLK (general-purpose I/O or vertical blanking indicator)
- PALI/HLK (PAL switch indicator or horizontal lock indicator)
- HSYNC (horizontal sync)
- AVID (active video indicator)

VSYNC, FID, PALI, and VBLK are software-set and programmable to the SCLK pixel count. This allows any possible alignment to the internal pixel count and line count. The default settings for a 525-/625-line video output are given as an example below.

NOTE: Line numbering conforms to ITU-R BT.470.

**Figure 2–2. 8-bit 4:2:2, Timing With 2x Pixel Clock (SCLK) Reference**

ITU-R BT.656 timing.

NOTE: AVID rising edge occurs 4 SCLK cycles early when in the ITU-R BT.656 output mode.

**Figure 2–3. Horizontal Synchronization Signals**

## 2.13 AVID Cropping

AVID or active video cropping provides a means to decrease bandwidth of the video output. This is accomplished by horizontally blanking a number of AVID pulses and by vertically blanking a number of lines per frame. The horizontal AVID cropping is controlled using registers 11h and 12h for start pixels MSB and LSB, respectively.

Registers 13h and 14h provide access to stop pixels MSB and LSB, respectively. The vertical AVID cropping is controlled using the vertical blanking (VBLK) start and stop registers at addresses 18h and 19h. Figure 2–4 shows an AVID application.

Figure 2-4. AVID Application

## 2.14 Embedded Syncs

Standards with embedded syncs insert SAV and EAV codes into the datastream at the beginning and end of horizontal blanking. These codes contain the V and F bits which also define vertical timing. F and V change on EAV. Table 2-4 gives the format of the SAV and EAV codes.

H equals 1 always indicates EAV. H equals 0 always indicates SAV. The alignment of V and F to the line and field counter varies depending on the standard. Please refer to ITU-R BT.656 for more information on embedded syncs.

The P bits are protection bits:

$$\begin{aligned} P3 &= V \text{ xor } H \\ P2 &= F \text{ xor } H \\ P1 &= F \text{ xor } V \\ P0 &= F \text{ xor } V \text{ xor } H \end{aligned}$$

Table 2-4. EAV and SAV Sequence

|             | 8-BIT DATA |    |    |    |    |    |    |    |

## 2.15 I<sup>2</sup>C Host Interface

The I<sup>2</sup>C standard consists of two signals, serial input/output data line (SDA) and input/output clock line (SCL), which carry information between the devices connected to the bus. A third signal (I2CSEL) is used for slave address selection. Although the I<sup>2</sup>C system can be multimastered, the TVP5150A decoder functions as a slave device only.

Both SDA and SCL must be connected to a positive supply voltage via a pullup resistor. When the bus is free, both lines are high. The slave address select terminal (I2CSEL) enables the use of two TVP5150A decoders tied to the same I<sup>2</sup>C bus. At power up, the status of the I2CSEL is polled. Depending on the write and read addresses to be used for the TVP5150A decoder, it can either be pulled low or high through a resistor. This terminal is multiplexed with YOUT7 and hence must not be tied directly to ground or IO\_DVDD. Table 2–6 summarizes the terminal functions of the I<sup>2</sup>C-mode host interface.

**Table 2–5. Write Address Selection**

| I2CSEL | WRITE ADDRESS |
|--------|---------------|
| 0      | B8h           |
| 1      | BAh           |

**Table 2–6. I<sup>2</sup>C Terminal Description**

| SIGNAL         | TYPE             | DESCRIPTION             |
|----------------|------------------|-------------------------|
| I2CSEL (YOUT7) | I                | Slave address selection |
| SCL            | I/O (open drain) | Input/output clock line |
| SDA            | I/O (open drain) | Input/output data line  |

Data transfer rate on the bus is up to 400 kbits/s. The number of interfaces connected to the bus is dependent on the bus capacitance limit of 400 pF. The data on the SDA line must be stable during the high period of the SCL except for start and stop conditions. The high or low state of the data line can only change with the clock signal on the SCL line being low. A high-to-low transition on the SDA line while the SCL is high indicates an I<sup>2</sup>C start condition. A low-to-high transition on the SDA line while the SCL is high indicates an I<sup>2</sup>C stop condition.

Every byte placed on the SDA must be 8 bits long. The number of bytes which can be transferred is unrestricted. Each byte must be followed by an acknowledge bit. The acknowledge-related clock pulse is generated by the I<sup>2</sup>C master.

### 2.15.1 I<sup>2</sup>C Write Operation

Data transfers occur utilizing the following illustrated formats.

An I<sup>2</sup>C master initiates a write operation to the TVP5150A decoder by generating a start condition (S) followed by the TVP5150A I<sup>2</sup>C address (as shown below), in MSB first bit order, followed by a 0 to indicate a write cycle. After receiving an acknowledge from the TVP5150A decoder, the master presents the subaddress of the register, or the first of a block of registers it wants to write, followed by one or more bytes of data, MSB first. The TVP5150A decoder acknowledges each byte after completion of each transfer. The I<sup>2</sup>C master terminates the write operation by generating a stop condition (P).

| I <sup>2</sup> C Stop (master) | P        |

<sup>†</sup> Repeat steps 6 and 7 until all data have been written.

## 2.15.2 I<sup>2</sup>C Read Operation

The read operation consists of two phases. The first phase is the address phase. In this phase, an I<sup>2</sup>C master initiates a write operation to the TVP5150A decoder by generating a start condition (S) followed by the TVP5150A I<sup>2</sup>C address, in MSB first bit order, followed by a 0 to indicate a write cycle. After receiving acknowledges from the TVP5150A decoder, the master presents the subaddress of the register or the first of a block of registers it wants to read. After the cycle is acknowledged, the master terminates the cycle immediately by generating a stop condition (P).

**Table 2–7. Read Address Selection**

| I <sup>2</sup> CSEL | READ ADDRESS |
|---------------------|--------------|
| 0                   | B9h          |
| 1                   | BBh          |

The second phase is the data phase. In this phase, an I<sup>2</sup>C master initiates a read operation to the TVP5150A decoder by generating a start condition followed by the TVP5150A I<sup>2</sup>C address (as shown below for a read operation), in MSB first bit order, followed by a 1 to indicate a read cycle. After an acknowledge from the TVP5150A decoder, the I<sup>2</sup>C master receives one or more bytes of data from the TVP5150A decoder. The I<sup>2</sup>C master acknowledges the transfer at the end of each byte. After the last data byte desired has been transferred from the TVP5150A decoder to the master, the master generates a not acknowledge followed by a stop.

### 2.15.2.1 Read Phase 1

|                                 |          |
|---------------------------------|----------|
| <b>Step 1</b>                   | <b>0</b> |
| I <sup>2</sup> C Start (master) | S        |

|                                           |          |          |          |          |          |          |          |          |
|-------------------------------------------|----------|----------|----------|----------|----------|----------|----------|----------|
| <b>Step 2</b>                             | <b>7</b> | <b>6</b> | <b>5</b> | <b>4</b> | <b>3</b> | <b>2</b> | <b>1</b> | <b>0</b> |
| I <sup>2</sup> C General address (master) | 1        | 0        | 1        | 1        | 1        | 0        | X        | 0        |

|                                      |          |
|--------------------------------------|----------|
| <b>Step 3</b>                        | <b>9</b> |
| I <sup>2</sup> C Acknowledge (slave) | A        |

|                                                 |          |          |          |          |          |          |          |          |
|-------------------------------------------------|----------|----------|----------|----------|----------|----------|----------|----------|
| <b>Step 4</b>                                   | <b>7</b> | <b>6</b> | <b>5</b> | <b>4</b> | <b>3</b> | <b>2</b> | <b>1</b> | <b>0</b> |
| I <sup>2</sup> C Read register address (master) | addr     | addr     | addr     | addr     | addr     | addr     | addr     | addr     |

|                                      |          |
|--------------------------------------|----------|
| <b>Step 5</b>                        | <b>9</b> |
| I <sup>2</sup> C Acknowledge (slave) | A        |

|                                |          |
|--------------------------------|----------|
| <b>Step 6</b>                  | <b>0</b> |
| I <sup>2</sup> C Stop (master) | P        |

### 2.15.2.2 Read Phase 2

|                                           |                |          |          |          |          |          |          |          |
|-------------------------------------------|----------------|----------|----------|----------|----------|----------|----------|----------|
| <b>Step 7</b>                             | <b>0</b>       |          |          |          |          |          |          |          |
| I <sup>2</sup> C Start (master)           | S              |          |          |          |          |          |          |          |
| <b>Step 8</b>                             | <b>7</b>       | <b>6</b> | <b>5</b> | <b>4</b> | <b>3</b> | <b>2</b> | <b>1</b> | <b>0</b> |
| I <sup>2</sup> C General address (master) | 1              | 0        | 1        | 1        | 1        | 0        | X        | 1        |
| <b>Step 9</b>                             | <b>9</b>       |          |          |          |          |          |          |          |
| I <sup>2</sup> C Acknowledge (slave)      | A              |          |          |          |          |          |          |          |
| <b>Step 10</b>                            | <b>7</b>       | <b>6</b> | <b>5</b> | <b>4</b> | <b>3</b> | <b>2</b> | <b>1</b> | <b>0</b> |
| I <sup>2</sup> C Read data (slave)        | Data           | Data     | Data     | Data     | Data     | Data     | Data     | Data     |
| <b>Step 11<sup>†</sup></b>                | <b>9</b>       |          |          |          |          |          |          |          |
| I <sup>2</sup> C Not acknowledge (master) | $\overline{A}$ |          |          |          |          |          |          |          |
| <b>Step 12</b>                            | <b>0</b>       |          |          |          |          |          |          |          |
| I <sup>2</sup> C Stop (master)            | P              |          |          |          |          |          |          |          |

<sup>†</sup> Repeat steps 10 and 11 for all bytes read. Master does not acknowledge the last read data received.

### 2.15.2.3 I<sup>2</sup>C Timing Requirements

The TVP5150A decoder requires delays in the I<sup>2</sup>C accesses to accommodate its internal processor's timing. In accordance with I<sup>2</sup>C specifications, the TVP5150A decoder holds the I<sup>2</sup>C clock line (SCL) low to indicate the wait period to the I<sup>2</sup>C master. If the I<sup>2</sup>C master is not designed to check for the I<sup>2</sup>C clock line held-low condition, then the maximum delays must always be inserted where required. These delays are of variable length; maximum delays are indicated in the following diagram:

Normal register writing address 00h–8Fh (addresses 90h–FFh do not require delays)

The 64- $\mu$ s delay is for all registers that do not require a reinitialization. Delays may be more for some registers.

## 2.16 Clock Circuits

An internal line-locked PLL generates the system and pixel clocks. A 14.31818-MHz clock is required to drive the PLL. This may be input to the TVP5150A decoder on terminal 5 (XTAL1), or a crystal of 14.31818-MHz fundamental resonant frequency may be connected across terminals 5 and 6 (XTAL2). Figure 2–5 shows the reference clock configurations. For the example crystal circuit shown (a parallel-resonant crystal with 14.31818-MHz fundamental frequency), the external capacitors must have the following relationship:

$$C_{L1} = C_{L2} = 2C_L - C_{STRAY}$$

where  $C_{STRAY}$  is the terminal capacitance with respect to ground. Figure 2–5 shows the reference clock configurations.

Figure 2–5. Reference Clock Configurations

## 2.17 Genlock Control and RTC

A Genlock control (GLCO) function is provided to support a standard video encoder to synchronize its internal color oscillator for properly reproduced color with unstable timebase sources like VCRs.

The frequency control word of the internal color subcarrier digital control oscillator (DTO) and the subcarrier phase reset bit are transmitted via terminal 23 (GLCO). The frequency control word is a 23-bit binary number. The frequency of the DTO can be calculated from the following equation:

$$F_{dto} = \frac{F_{ctrl}}{2^{23}} \times F_{sclk}$$

where  $F_{dto}$  is the frequency of the DTO,  $F_{ctrl}$  is the 23-bit DTO frequency control, and  $F_{sclk}$  is the frequency of the SCLK.

### 2.17.1 TVP5150A Genlock Control Interface

A write of 1 to bit 4 of the chrominance control register at I<sup>2</sup>C subaddress 1Ah causes the subcarrier DTO phase reset bit to be sent on the next scan line on GLCO. The active low reset bit occurs 7 SCLKs after the transmission of the last bit of DCO frequency control. Upon the transmission of the reset bit, the phase of the TVP5150A internal subcarrier DCO is reset to zero.

A Genlock slave device can be connected to the GLCO terminal and uses the information on GLCO to synchronize its internal color phase DCO to achieve clean line and color lock.

Figure 2–6 shows the timing diagram of the GLCO mode.

Figure 2–6. GLCO Timing

### 2.17.2 RTC Mode

Figure 2–7 shows the timing diagram of the RTC mode. Clock rate for the RTC mode is 4 times slower than the GLCO clock rate. For PLL frequency control, the upper 22 bits are used. Each frequency control bit is 2 clock cycles long. The active low reset bit occurs 6 CLKs after the transmission of the last bit of PLL frequency control.

Figure 2–7. RTC Timing

### 2.18 Reset and Power Down

Terminals 8 (RESETB) and 28 (PDN) work together to put the TVP5150A decoder into one of the two modes. Table 2–8 shows the configuration.

Table 2–8. Reset and Power Down Modes

| PDN | RESETB | CONFIGURATION            |
|-----|--------|--------------------------|
| 0   | 0      | Reserved (unknown state) |
| 0   | 1      | Powers down the decoder  |
| 1   | 0      | Resets the decoder       |
| 1   | 1      | Normal operation         |

### 2.19 Internal Control Registers

The TVP5150A decoder is initialized and controlled by a set of internal registers which set all device operating parameters. Communication between the external controller and the TVP5150A decoder is through I<sup>2</sup>C. Table 2–9 shows the summary of these registers. The reserved registers must not be written. Reserved bits in the defined registers must be written with 0s, unless otherwise noted. The detailed programming information of each register is described in the following sections.

**Table 2–9. Registers Summary**

| REGISTER FUNCTION                     | ADDRESS | DEFAULT | R/W |
|---------------------------------------|---------|---------|-----|
| Video input source selection #1       | 00h     | 00h     | R/W |
| Analog channel controls               | 01h     | 15h     | R/W |

## 2.20 Register Definitions

### 2.20.1 Video Input Source Selection #1 Register

|         |     |
|---------|-----|
| Address | 00h |
| Default | 00h |

| 7        | 6 | 5 | 4 | 3            | 2        | 1                          | 0                 |
|----------|---|---|---|--------------|----------|----------------------------|-------------------|
| Reserved |   |   |   | Black output | Reserved | Channel 1 source selection | S-video selection |

Channel 1 source selection:

0 = AIP1A selected (default)

1 = AIP1B selected

**Table 2–10. Analog Channel and Video Mode Selection**

|           | INPUT(S) SELECTED            | ADDRESS 00 |       |
|-----------|------------------------------|------------|-------|
|           |                              | BIT 1      | BIT 0 |
| Composite | AIP1A (default)              | 0          | 0     |
|           | AIP1B                        | 1          | 0     |
| S-Video   | AIP1A (luma), AIP1B (chroma) | x          | 1     |

Black output:

0 = Normal operation (default)

1 = Force black screen output (outputs synchronized)

a. Forced to 10h in normal mode

b. Forced to 01h in extended mode

## 2.20.2 Analog Channel Controls Register

|         |     |
|---------|-----|
| Address | 01h |
| Default | 15h |

| 7        | 6 | 5 | 4 | 3                        | 2 | 1                      | 0 |
|----------|---|---|---|--------------------------|---|------------------------|---|
| Reserved |   |   | 1 | Automatic offset control |   | Automatic gain control |   |

Automatic offset control:

- 00 = Disabled
- 01 = Automatic offset enabled (default)
- 10 = Reserved
- 11 = Offset level frozen to the previously set value

Automatic gain control (AGC):

- 00 = Disabled (fixed gain value)
- 01 = AGC enabled (default)
- 10 = Reserved
- 11 = AGC frozen to the previously set value

## 2.20.3 Operation Mode Controls Register

|         |     |
|---------|-----|
| Address | 02h |
| Default | 00h |

| 7        | 6                            | 5           | 4 | 3                  | 2                           | 1                 | 0               |
|----------|------------------------------|-------------|---|--------------------|-----------------------------|-------------------|-----------------|
| Reserved | Color burst reference enable | TV/VCR mode |   | White peak disable | Color subcarrier PLL frozen | Luma peak disable | Power down mode |

Color burst reference enable

- 0 = Color burst reference for AGC disabled (default)
- 1 = Color burst reference for AGC enabled

TV/VCR mode

- 00 = Automatic mode determined by the internal detection circuit. (default)
- 01 = Reserved
- 10 = VCR (nonstandard video) mode
- 11 = TV (standard video) mode

With automatic detection enabled, unstable or nonstandard syncs on the input video forces the detector into the VCR mode. This turns off the comb filters and turns on the chroma trap filter.

White peak disable

- 0 = White peak protection enabled (default)
- 1 = White peak protection disabled

Color subcarrier PLL frozen:

- 0 = Color subcarrier PLL increments by the internally generated phase increment. (default)  
GLCO pin outputs the frequency increment.
- 1 = Color subcarrier PLL stops operating.  
GLCO pin outputs the frozen frequency increment.

Luma peak disable

- 0 = Luma peak processing enabled (default)
- 1 = Luma peak processing disabled

Power down mode:

- 0 = Normal operation (default)
- 1 = Power down mode. A/Ds are turned off and internal clocks are reduced to minimum.

## 2.20.4 Miscellaneous Control Register

|         |     |
|---------|-----|
| Address | 03h |
| Default | 01h |

| 7    | 6        | 5                  | 4                  | 3                           | 2                                               | 1                        | 0                   |
|------|----------|--------------------|--------------------|-----------------------------|-------------------------------------------------|--------------------------|---------------------|
| VBKO | GPCL pin | GPCL output enable | Lock status (HVLK) | YCbCr output enable (TVPOE) | HSYNC, VSYNC/PALI, AVID, FID/GLCO output enable | Vertical blanking on/off | Clock output enable |

VBKO (pin 27) function select:

- 0 = GPCL (default)
- 1 = VBLK

GPCL (data is output based on state of bit 5):

- 0 = GPCL outputs 0 (default)
- 1 = GPCL outputs 1

GPCL output enable:

- 0 = GPCL is inactive (default)
- 1 = GPCL is output

**NOTE:** GPCL must not be programmed to be 0 when register 0Fh bit 1 is 1 (GPCL/VBLK).

Lock status (HVLK) (configured along with register 0Fh, please see Figure 2–8 for the relationship between the configuration shared pins):

- 0 = Terminal VSYNC/PALI outputs the PAL indicator (PALI) signal and terminal FID/GLCO outputs the field ID (FID) signal (default) (if terminals are configured to output PALI and FID in register 0Fh)
- 1 = Terminal VSYNC/PALI outputs the horizontal lock indicator (HLK) and terminal FID outputs the vertical lock indicator (VLK) (if terminals are configured to output PALI and FID in register 0Fh)

These are additional functionalities that are provided for ease of use.

YCbCr output enable:

- 0 = YOUT[7:0] high impedance (default)
- 1 = YOUT[7:0] active

HSYNC, VSYNC/PALI, active video indicator (AVID), and FID/GLCO output enables:

- 0 = HSYNC, VSYNC/PALI, AVID, and FID/GLCO are high-impedance (default).
- 1 = HSYNC, VSYNC/PALI, AVID, and FID/GLCO are active.

Vertical blanking on/off:

- 0 = Vertical blanking (VBLK) off (default)
- 1 = Vertical blanking (VBLK) on

Clock output enable:

- 0 = SCLK output is high impedance.
- 1 = SCLK output is enabled (default).

**NOTE:** When enabling the outputs, ensure the clock output is not accidentally disabled.

**Table 2–11. Digital Output Control**

| Register 03h, Bit 3 (TVPOE) | Register C2h, Bit 2 (VDPOE) | YCbCr Output   | Notes                                               |
|-----------------------------|-----------------------------|----------------|-----------------------------------------------------|
| 0                           | X                           | High impedance | After both YCbCr output enable bits are programmed. |
| X                           | 0                           | High impedance | After both YCbCr output enable bits are programmed. |
| 1                           | 1                           | Active         | After both YCbCr output enable bits are programmed. |

**NOTE:** VDPOE default is 1 and TVPOE default is 0.

**Figure 2–8. Configuration Shared Pins**

**NOTE:** Also refer to the configuration shared pins register at subaddress 0Fh.

## 2.20.5 Autoswitch Mask Register

|         |          |            |
|---------|----------|------------|
| Address | 04h      |            |
| Device  | TVP5150A | TVP5150AM1 |
| Default | FCh      | DCh        |

| 7        | 6 | 5       | 4        | 3        | 2        | 1        | 0 |
|----------|---|---------|----------|----------|----------|----------|---|
| Reserved |   | SEC_OFF | N443_OFF | PALN_OFF | PALM_OFF | Reserved |   |

N443\_OFF:

0 = NTSC443 is unmasked from the autoswitch process. Autoswitch does switch to NTSC443.

1 = NTSC443 is masked from the autoswitch process. Autoswitch does not switch to NTSC443. (default)

PALN\_OFF:

0 = PAL-N is unmasked from the autoswitch process. Autoswitch does switch to PAL-N.

1 = PAL-N is masked from the autoswitch process. Autoswitch does not switch to PAL-N. (default)

PALM\_OFF:

0 = PAL-M is unmasked from the autoswitch process. Autoswitch does switch to PAL-M.

1 = PAL-M is masked from the autoswitch process. Autoswitch does not switch to PAL-M. (default)

SEC\_OFF:

0 = SECAM is unmasked from the autoswitch process. Autoswitch does switch to SECAM. (default for TVP5150AM1)

1 = SECAM is masked from the autoswitch process. Autoswitch does not switch to SECAM. (default for TVP5150A)

## 2.20.6 Color Killer Threshold Control Register

|         |     |
|---------|-----|
| Address | 06h |
| Default | 10h |

| 7        | 6                      | 5 | 4                      | 3 | 2 | 1 | 0 |
|----------|------------------------|---|------------------------|---|---|---|---|
| Reserved | Automatic color killer |   | Color killer threshold |   |   |   |   |

Automatic color killer:

00 = Automatic mode (default)

01 = Reserved

10 = Color killer enabled, the CbCr terminals are forced to a zero color state.

11 = Color killer disabled

Color killer threshold:

11111 = -30 dB (minimum)

10000 = -24 dB (default)

00000 = -18 dB (maximum)

## 2.20.7 Luminance Processing Control #1 Register

|         |     |
|---------|-----|
| Address | 07h |
| Default | 60h |

| 7                     | 6                    | 5                  | 4                                            | 3                                                         | 2 | 1 | 0 |
|-----------------------|----------------------|--------------------|----------------------------------------------|-----------------------------------------------------------|---|---|---|
| 2x luma output enable | Pedestal not present | Disable raw header | Luma bypass enabled during vertical blanking | Luminance signal delay with respect to chrominance signal |   |   |   |

2x luma output enable:

- 0 = Output depends on bit 4, luminance bypass enabled during vertical blanking (default).
- 1 = Outputs 2x luma samples during the entire frame. This bit takes precedence over bit 4.

Pedestal not present:

- 0 = 7.5 IRE pedestal is present on the analog video input signal.
- 1 = Pedestal is not present on the analog video input signal (default).

Disable raw header:

- 0 = Insert 656 ancillary headers for raw data
- 1 = Disable 656 ancillary headers and instead force dummy ones (0x40) (default)

Luminance bypass enabled during vertical blanking:

- 0 = Disabled. If bit 7, 2x luma output enable, is 0, then normal luminance processing occurs and YCbCr samples are output during the entire frame (default).
- 1 = Enabled. If bit 7, 2x luma output enable, is 0, then normal luminance processing occurs and YCbCr samples are output during VACTIVE and 2x luma samples are output during VBLK. Luminance bypass occurs for the duration of the vertical blanking as defined by registers 18h and 19h.

Luminance bypass occurs for the duration of the vertical blanking as defined by registers 18h and 19h.

Luma signal delay with respect to chroma signal in pixel clock increments (range -8 to +7 pixel clocks):

- 1111 = -8 pixel clocks delay
- 1011 = -4 pixel clocks delay
- 1000 = -1 pixel clocks delay
- 0000 = 0 pixel clocks delay (default)
- 0011 = 3 pixel clocks delay
- 0111 = 7 pixel clocks delay

## 2.20.8 Luminance Processing Control #2 Register

|         |     |
|---------|-----|
| Address | 08h |
| Default | 00h |

|          |                         |          |   |              |   |                 |   |
|----------|-------------------------|----------|---|--------------|---|-----------------|---|
| 7        | 6                       | 5        | 4 | 3            | 2 | 1               | 0 |
| Reserved | Luminance filter select | Reserved |   | Peaking gain |   | Mac AGC control |   |

Luminance filter select:

- 0 = Luminance comb filter enabled (default)
- 1 = Luminance chroma trap filter enabled

Peaking gain (sharpness):

- 00 = 0 (default)
- 01 = 0.5
- 10 = 1
- 11 = 2

Information on peaking frequency: ITU-R BT.601 sampling rate: all standards—peaking center frequency is 2.6 MHz

Mac AGC control:

- 00 = Auto mode
- 01 = Auto mode
- 10 = Force Macrovision AGC pulse detection off
- 11 = Force Macrovision AGC pulse detection on

## 2.20.9 Brightness Control Register

|         |     |
|---------|-----|
| Address | 09h |
| Default | 80h |

|                    |   |   |   |   |   |   |   |
|--------------------|---|---|---|---|---|---|---|
| 7                  | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Brightness control |   |   |   |   |   |   |   |

Brightness control:

- 1111 1111 = 255 (bright)
- 1000 0000 = 128 (default)
- 0000 0000 = 0 (dark)

## 2.20.10 Color Saturation Control Register

|         |     |
|---------|-----|
| Address | 0Ah |
| Default | 80h |

|                    |   |   |   |   |   |   |   |
|--------------------|---|---|---|---|---|---|---|
| 7                  | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Saturation control |   |   |   |   |   |   |   |

Saturation control:

- 1111 1111 = 255 (maximum)
- 1000 0000 = 128 (default)
- 0000 0000 = 0 (no color)

## 2.20.11 Hue Control Register

(does not apply to SECAM)

|         |     |
|---------|-----|
| Address | 0Bh |
| Default | 00h |

|             |   |   |   |   |   |   |   |
|-------------|---|---|---|---|---|---|---|
| 7           | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Hue control |   |   |   |   |   |   |   |

Hue control:

0111 1111 = +180 degrees  
0000 0000 = 0 degrees (default)  
1000 0000 = -180 degrees

## 2.20.12 Contrast Control Register

|         |     |
|---------|-----|
| Address | 0Ch |
| Default | 80h |

|                  |   |   |   |   |   |   |   |
|------------------|---|---|---|---|---|---|---|
| 7                | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Contrast control |   |   |   |   |   |   |   |

Contrast control:

1111 1111 = 255 (maximum contrast)  
1000 0000 = 128 (default)  
0000 0000 = 0 (minimum contrast)

## 2.20.13 Outputs and Data Rates Select Register

|         |     |
|---------|-----|
| Address | 0Dh |
| Default | 47h |

|          |                         |                  |                        |   |                     |   |   |
|----------|-------------------------|------------------|------------------------|---|---------------------|---|---|
| 7        | 6                       | 5                | 4                      | 3 | 2                   | 1 | 0 |
| Reserved | YCbCr output code range | CbCr code format | YCbCr data path bypass |   | YCbCr output format |   |   |

YCbCr output code range:

0 = ITU-R BT.601 coding range (Y ranges from 16 to 235. U and V range from 16 to 240)  
1 = Extended coding range (Y, U, and V range from 1 to 254) (default)

CbCr code format:

0 = Offset binary code (2s complement + 128) (default)  
1 = Straight binary code (2s complement)

YCbCr data path bypass:

00 = Normal operation (default)  
01 = Decimation filter output connects directly to the YCbCr output pins. This data is similar to the digitized composite data, but the HBLANK area is replaced with ITU-R BT.656 digital blanking.  
10 = Digitized composite (or digitized S-video luma). A/D output connects directly to the YCbCr output pins.  
11 = Reserved

YCbCr output format:

- 000 = 8-bit 4:2:2 YCbCr with discrete sync output
- 001 = Reserved
- 010 = Reserved
- 011 = Reserved
- 100 = Reserved
- 101 = Reserved
- 110 = Reserved
- 111 = 8-bit ITU-R BT.656 interface with embedded sync output (default)

## 2.20.14 Luminance Processing Control #3 Register

|         |     |
|---------|-----|
| Address | 0Eh |
| Default | 00h |

|          |   |   |   |   |   |                              |   |
|----------|---|---|---|---|---|------------------------------|---|
| 7        | 6 | 5 | 4 | 3 | 2 | 1                            | 0 |
| Reserved |   |   |   |   |   | Luminance trap filter select |   |

Luminance filter stop band bandwidth (MHz):

- 00 = No notch (default)
- 01 = Notch 1
- 10 = Notch 2
- 11 = Notch 3

Luminance filter select [1:0] selects one of the four chroma trap (notch) filters to produce luminance signal by removing the chrominance signal from the composite video signal. The stopband of the chroma trap filter is centered at the chroma subcarrier frequency with stopband bandwidth controlled by the two control bits. Please refer to the following table for the stopband bandwidths. The WCF bit is controlled in the chrominance control #2 register, see Section 2.20.25.

| WCF | FILTER SELECT | NTSC/PAL/SECAM ITU-R BT.601 |
|-----|---------------|-----------------------------|
| 0   | 00            | 1.2214                      |
|     | 01            | 0.8782                      |
|     | 10            | 0.7297                      |
|     | 11            | 0.4986                      |
| 1   | 00            | 1.4170                      |
|     | 01            | 1.0303                      |
|     | 10            | 0.8438                      |
|     | 11            | 0.5537                      |

### 2.20.15 Configuration Shared Pins Register

|         |     |
|---------|-----|
| Address | 0Fh |
| Default | 08h |

| 7        | 6      | 5        | 4       | 3        | 2          | 1                | 0         |
|----------|--------|----------|---------|----------|------------|------------------|-----------|
| Reserved | LOCK23 | Reserved | LOCK24B | FID/GLCO | VSYNC/PALI | INTREQ/GPCL/VBLK | SCLK/PCLK |

LOCK23 (pin 23) function select:

- 0 = FID (default, if bit 3 is selected to output FID)
- 1 = Lock indicator (indicates whether the device is locked vertically)

LOCK24B (pin 24) function select:

- 0 = PALI (default, if bit 2 is selected to output PALI)
- 1 = Lock indicator (indicates whether the device is locked horizontally)

FID/GLCO (pin 23) function select (also refer to register 03h for enhanced functionality):

- 0 = FID
- 1 = GLCO (default)

VSYNC/PALI (pin 24) function select (also refer to register 03h for enhanced functionality):

- 0 = VSYNC (default)
- 1 = PALI

INTREQ/GPCL/VBLK (pin 27) function select:

- 0 = INTREQ (default)
- 1 = GPCL or VBLK depending on bit 7 of register 03h

SCLK/PCLK (pin 9) function select:

- 0 = SCLK (default)
- 1 = PCLK (1x pixel clock frequency)

Please see Figure 2–8 for the relationship between the configuration shared pins.

### 2.20.16 Active Video Cropping Start Pixel MSB Register

|         |     |
|---------|-----|
| Address | 11h |
| Default | 00h |

| 7                          | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|----------------------------|---|---|---|---|---|---|---|
| AVID start pixel MSB [7:0] |   |   |   |   |   |   |   |

Active video cropping start pixel MSB [9:2], set this register first before setting register 12h. The TVP5150A decoder updates the AVID start values only when register 12h is written to. This start pixel value is relative to the default values of the AVID start pixel.

### 2.20.17 Active Video Cropping Start Pixel LSB Register

|         |     |
|---------|-----|
| Address | 12h |
| Default | 00h |

|          |   |   |   |   |             |                            |   |
|----------|---|---|---|---|-------------|----------------------------|---|
| 7        | 6 | 5 | 4 | 3 | 2           | 1                          | 0 |
| Reserved |   |   |   |   | AVID active | AVID start pixel LSB [1:0] |   |

AVID active:

0 = AVID out active in VBLK (default)

1 = AVID out inactive in VBLK

Active video cropping start pixel LSB [1:0]: The TVP5150A decoder updates the AVID start values only when this register is written to.

AVID start [9:0] (combined registers 11h and 12h):

01 1111 1111 = 511

00 0000 0001 = 1

00 0000 0000 = 0 (default)

11 1111 1111 = -1

10 0000 0000 = -512

### 2.20.18 Active Video Cropping Stop Pixel MSB Register

|         |     |
|---------|-----|
| Address | 13h |
| Default | 00h |

|                     |   |   |   |   |   |   |   |
|---------------------|---|---|---|---|---|---|---|
| 7                   | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| AVID stop pixel MSB |   |   |   |   |   |   |   |

Active video cropping stop pixel MSB [9:2], set this register first before setting the register 14h. The TVP5150A decoder updates the AVID stop values only when register 14h is written to. This stop pixel value is relative to the default values of the AVID stop pixel.

### 2.20.19 Active Video Cropping Stop Pixel LSB Register

|         |     |
|---------|-----|
| Address | 14h |
| Default | 00h |

|          |   |   |   |   |   |                     |   |
|----------|---|---|---|---|---|---------------------|---|
| 7        | 6 | 5 | 4 | 3 | 2 | 1                   | 0 |
| Reserved |   |   |   |   |   | AVID stop pixel LSB |   |

Active video cropping stop pixel LSB [1:0]: The number of pixels of active video must be an even number. The TVP5150A decoder updates the AVID stop values only when this register is written to.

AVID stop [9:0] (combined registers 13h and 14h):

01 1111 1111 = 511

00 0000 0001 = 1

00 0000 0000 = 0 (default) (see Figure 2-3 and Figure 2-4)

11 1111 1111 = -1

10 0000 0000 = -512

## 2.20.20 Genlock and RTC Register

|         |     |
|---------|-----|
| Address | 15h |
| Default | 01h |

|          |   |                 |   |          |          |   |   |
|----------|---|-----------------|---|----------|----------|---|---|
| 7        | 6 | 5               | 4 | 3        | 2        | 1 | 0 |
| Reserved |   | F/V bit control |   | Reserved | GLCO/RTC |   |   |

F/V bit control

| BIT 5 | BIT 4 | NUMBER OF LINES  | F BIT        | V BIT                    |
|-------|-------|------------------|--------------|--------------------------|
| 0     | 0     | Standard         | ITU-R BT.656 | ITU-R BT.656             |
|       |       | Nonstandard even | Force to 1   | Switch at field boundary |
|       |       | Nonstandard odd  | Toggles      | Switch at field boundary |
| 0     | 1     | Standard         | ITU-R BT.656 | ITU-R BT.656             |
|       |       | Nonstandard      | Toggles      | Switch at field boundary |
| 1     | 0     | Standard         | ITU-R BT.656 | ITU-R BT.656             |
|       |       | Nonstandard      | Pulse mode   | Switch at field boundary |
| 1     | 1     | Illegal          |              |                          |

GLCO/RTC. The following table helps in understanding the different modes.

| BIT 2 | BIT 1 | BIT 0 | GENLOCK/RTC MODE            |
|-------|-------|-------|-----------------------------|
| 0     | X     | 0     | GLCO                        |
| 0     | X     | 1     | RTC output mode 0 (default) |
| 1     | X     | 0     | GLCO                        |
| 1     | X     | 1     | RTC output mode 1           |

All other values are reserved.

Figure 2–6 shows the timing of GLCO and Figure 2–7 shows the timing of RTC.

2.20.21 Horizontal Sync (HSYNC) Start Register

|         |     |
|---------|-----|
| Address | 16h |
| Default | 80h |

|             |   |   |   |   |   |   |   |
|-------------|---|---|---|---|---|---|---|
| 7           | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| HSYNC start |   |   |   |   |   |   |   |

HSYNC start:

- 1111 1111 = -127 x 4 pixel clocks
- 1111 1110 = -126 x 4 pixel clocks
- 1000 0001 = -1 x 4 pixel clocks
- 1000 0000 = 0 pixel clocks (default)
- 0111 1111 = 1 x 4 pixel clocks
- 0111 1110 = 2 x 4 pixel clocks
- 0000 0000 = 128 x 4 pixel clocks

Figure 2-9. Horizontal Sync

Table 2-12. Clock Delays (SCLKs)

| STANDARD | Nhbhs | Nhb |
|----------|-------|-----|
| NTSC     | 16    | 272 |
| PAL      | 20    | 284 |
| SECAM    | 40    | 280 |

Detailed timing information is also available in Section 2.12, *Synchronization Signals*.

## 2.20.22 Vertical Blanking Start Register

|         |     |
|---------|-----|
| Address | 18h |
| Default | 00h |

|                         |   |   |   |   |   |   |   |
|-------------------------|---|---|---|---|---|---|---|
| 7                       | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Vertical blanking start |   |   |   |   |   |   |   |

Vertical blanking (VBLK) start:

- 0111 1111 = 127 lines after start of vertical blanking interval
- 0000 0001 = 1 line after start of vertical blanking interval
- 0000 0000 = Same time as start of vertical blanking interval (default) (see Figure 2-2)
- 1111 1111 = 1 line before start of vertical blanking interval
- 1000 0000 = 128 lines before start of vertical blanking interval

Vertical blanking is adjustable with respect to the standard vertical blanking intervals. The setting in this register determines the timing of the GPCL/VBLK signal when it is configured to output vertical blank (see register 03h). The setting in this register also determines the duration of the luma bypass function (see register 07h).

## 2.20.23 Vertical Blanking Stop Register

|         |     |
|---------|-----|
| Address | 19h |
| Default | 00h |

|                        |   |   |   |   |   |   |   |
|------------------------|---|---|---|---|---|---|---|
| 7                      | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Vertical blanking stop |   |   |   |   |   |   |   |

Vertical blanking (VBLK) stop:

- 0111 1111 = 127 lines after stop of vertical blanking interval
- 0000 0001 = 1 line after stop of vertical blanking interval
- 0000 0000 = Same time as stop of vertical blanking interval (default) (see Figure 2-2)
- 1111 1111 = 1 line before stop of vertical blanking interval
- 1000 0000 = 128 lines before stop of vertical blanking interval

Vertical blanking is adjustable with respect to the standard vertical blanking intervals. The setting in this register determines the timing of the GPCL/VBLK signal when it is configured to output vertical blank (see register 03h). The setting in this register also determines the duration of the luma bypass function (see register 07h).

## 2.20.24 Chrominance Control #1 Register

|         |     |
|---------|-----|
| Address | 1Ah |
| Default | 0Ch |

| 7        | 6 | 5 | 4               | 3                                             | 2                                   | 1                            | 0 |
|----------|---|---|-----------------|-----------------------------------------------|-------------------------------------|------------------------------|---|
| Reserved |   |   | Color PLL reset | Chrominance adaptive comb filter enable (ACE) | Chrominance comb filter enable (CE) | Automatic color gain control |   |

Color PLL reset:

- 0 = Color PLL not reset (default)
- 1 = Color PLL reset

Color PLL phase is reset to zero and the color PLL reset bit then immediately returns to zero. When this bit is set, the subcarrier PLL phase reset bit is transmitted on terminal 23 (GLCO) on the next line (NTSC or PAL).

Chrominance adaptive comb filter enable (ACE):

- 0 = Disable
- 1 = Enable (default)

Chrominance comb filter enable (CE):

- 0 = Disable
- 1 = Enable (default)

Automatic color gain control (ACGC):

- 00 = ACGC enabled (default)
- 01 = Reserved
- 10 = ACGC disabled
- 11 = ACGC frozen to the previously set value

## 2.20.25 Chrominance Control #2 Register

|         |     |
|---------|-----|
| Address | 1Bh |
| Default | 14h |

|          |   |   |   |          |     |                           |   |
|----------|---|---|---|----------|-----|---------------------------|---|
| 7        | 6 | 5 | 4 | 3        | 2   | 1                         | 0 |
| Reserved |   |   |   | Reserved | WCF | Chrominance filter select |   |

Wideband chroma filter (WCF):

0 = Disable

1 = Enable (default)

Chrominance filter select:

00 = No notch (default)

01 = Notch 1

10 = Notch 2

11 = Notch 3

Chrominance output bandwidth (MHz):

| WCF | FILTER SELECT | NTSC/PAL/SECAM ITU-R BT.601 |
|-----|---------------|-----------------------------|
| 0   | 00            | 1.2214                      |
|     | 01            | 0.8782                      |
|     | 10            | 0.7297                      |
|     | 11            | 0.4986                      |
| 1   | 00            | 1.4170                      |
|     | 01            | 1.0303                      |
|     | 10            | 0.8438                      |
|     | 11            | 0.5537                      |

## 2.20.26 Interrupt Reset Register B

|         |     |
|---------|-----|
| Address | 1Ch |
| Default | 00h |

| 7                             | 6                                | 5        | 4                        | 3                              | 2                        | 1                      | 0                    |
|-------------------------------|----------------------------------|----------|--------------------------|--------------------------------|--------------------------|------------------------|----------------------|
| Software initialization reset | Macrovision detect changed reset | Reserved | Field rate changed reset | Line alternation changed reset | Color lock changed reset | H/V lock changed reset | TV/VCR changed reset |

Interrupt reset register B is used by the external processor to reset the interrupt status bits in interrupt status register B. Bits loaded with a 1 allow the corresponding interrupt status bit to reset to 0. Bits loaded with a 0 have no effect on the interrupt status bits.

Software initialization reset:

- 0 = No effect (default)
- 1 = Reset software initialization bit

Macrovision detect changed reset:

- 0 = No effect (default)
- 1 = Reset Macrovision detect changed bit

Field rate changed reset:

- 0 = No effect (default)
- 1 = Reset field rate changed bit

Line alternation changed reset:

- 0 = No effect (default)
- 1 = Reset line alternation changed bit

Color lock changed reset:

- 0 = No effect (default)
- 1 = Reset color lock changed bit

H/V lock changed reset:

- 0 = No effect (default)
- 1 = Reset H/V lock changed bit

TV/VCR changed reset [TV/VCR mode is determined by counting the total number of lines/frame. The mode switches to VCR for nonstandard number of lines]:

- 0 = No effect (default)
- 1 = Reset TV/VCR changed bit

## 2.20.27 Interrupt Enable Register B

|         |     |
|---------|-----|
| Address | 1Dh |
| Default | 00h |

| 7                                       | 6                          | 5        | 4                  | 3                        | 2                  | 1                | 0              |
|-----------------------------------------|----------------------------|----------|--------------------|--------------------------|--------------------|------------------|----------------|
| Software initialization occurred enable | Macrovision detect changed | Reserved | Field rate changed | Line alternation changed | Color lock changed | H/V lock changed | TV/VCR changed |

Interrupt enable register B is used by the external processor to mask unnecessary interrupt sources for interrupt B. Bits loaded with a 1 allow the corresponding interrupt condition to generate an interrupt on the external pin. Conversely, bits loaded with 0s mask the corresponding interrupt condition from generating an interrupt on the external pin. This register only affects the external pin, it does not affect the bits in the interrupt status register. A given condition can set the appropriate bit in the status register and not cause an interrupt on the external pin. To determine if this device is driving the interrupt pin either AND interrupt status register B with interrupt enable register B or check the state of interrupt B in the interrupt B active register.

Software initialization occurred enable:

- 0 = Disabled (default)
- 1 = Enabled

Macrovision detect changed:

- 0 = Disabled (default)
- 1 = Enabled

Field rate changed:

- 0 = Disabled (default)
- 1 = Enabled

Line alternation changed:

- 0 = Disabled (default)
- 1 = Enabled

Color lock changed:

- 0 = Disabled (default)
- 1 = Enabled

H/V lock changed:

- 0 = Disabled (default)
- 1 = Enabled

TV/VCR changed:

- 0 = Disabled (default)
- 1 = Enabled

## 2.20.28 Interrupt Configuration Register B

|         |     |
|---------|-----|
| Address | 1Eh |
| Default | 00h |

|          |   |   |   |   |   |   |                      |
|----------|---|---|---|---|---|---|----------------------|
| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0                    |
| Reserved |   |   |   |   |   |   | Interrupt polarity B |

Interrupt polarity B:

- 0 = Interrupt B is active low (default).
- 1 = Interrupt B is active high.

Interrupt polarity B must be same as interrupt polarity A bit at bit 0 of the interrupt configuration register A at address C2h.

Interrupt configuration register B is used to configure the polarity of interrupt B on the external interrupt pin. When the interrupt B is configured for active low, the pin is driven low when active and high-impedance when inactive (open-drain). Conversely, when the interrupt B is configured for active high, it is driven high for active and driven low for inactive.

## 2.20.29 Video Standard Register

|         |     |
|---------|-----|
| Address | 28h |
| Default | 00h |

|          |   |   |   |                |   |   |   |
|----------|---|---|---|----------------|---|---|---|
| 7        | 6 | 5 | 4 | 3              | 2 | 1 | 0 |
| Reserved |   |   |   | Video standard |   |   |   |

Video standard:

- 0000 = Autoswitch mode (default)
- 0001 = Reserved
- 0010 = (M) NTSC ITU-R BT.601
- 0011 = Reserved
- 0100 = (B, G, H, I, N) PAL ITU-R BT.601
- 0101 = Reserved
- 0110 = (M) PAL ITU-R BT.601
- 0111 = Reserved
- 1000 = (Combination-N) PAL ITU-R BT.601
- 1001 = Reserved
- 1010 = NTSC 4.43 ITU-R BT.601
- 1011 = Reserved
- 1100 = SECAM ITU-R BT.601

With the autoswitch code running, the user can force the device to operate in a particular video standard mode and sample rate by writing the appropriate value into this register.

## 2.20.30 Cb Gain Factor Register

|         |     |
|---------|-----|
| Address | 2Ch |
|---------|-----|

|                |   |   |   |   |   |   |   |
|----------------|---|---|---|---|---|---|---|
| 7              | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Cb gain factor |   |   |   |   |   |   |   |

This is a read-only register that provides the gain applied to the Cb in the YCbCr data stream.

### 2.20.31 Cr Gain Factor Register

|         |     |
|---------|-----|
| Address | 2Dh |
|---------|-----|

|                |   |   |   |   |   |   |   |
|----------------|---|---|---|---|---|---|---|
| 7              | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Cr gain factor |   |   |   |   |   |   |   |

This is a read-only register that provides the gain applied to the Cr in the YCbCr data stream.

### 2.20.32 Macrovision On Counter Register

|         |     |
|---------|-----|
| Address | 2Eh |
| Default | 0Fh |

|                        |   |   |   |   |   |   |   |
|------------------------|---|---|---|---|---|---|---|
| 7                      | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Macrovision on counter |   |   |   |   |   |   |   |

This register allows the user to determine how many consecutive frames in which the Macrovision AGC pulses have to be detected before the decoder decides that the Macrovision AGC pulses are present.

### 2.20.33 Macrovision Off Counter Register

|         |     |
|---------|-----|
| Address | 2Fh |
| Default | 01h |

|                         |   |   |   |   |   |   |   |
|-------------------------|---|---|---|---|---|---|---|
| 7                       | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Macrovision off counter |   |   |   |   |   |   |   |

This register allows the user to determine how many consecutive frames in which the Macrovision AGC pulses are not detected before the decoder decides that the Macrovision AGC pulses are not present.

### 2.20.34 656 Revision Select Register

**NOTE:** This register exists only for the TVP5150AM1.

|         |     |
|---------|-----|
| Address | 30h |
| Default | 00h |

|          |   |   |   |   |   |   |                     |
|----------|---|---|---|---|---|---|---------------------|
| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0                   |
| Reserved |   |   |   |   |   |   | 656 revision select |

656 revision select:

- 0 = Adheres to ITU-R BT.656.4 timing (default for TVP5150AM1, this is the only option for TVP5150A).
- 1 = Adheres to ITU-R BT.656.3 timing.

### 2.20.35 MSB of Device ID Register

|         |     |
|---------|-----|
| Address | 80h |
| Default | 51h |

|                  |   |   |   |   |   |   |   |
|------------------|---|---|---|---|---|---|---|
| 7                | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| MSB of device ID |   |   |   |   |   |   |   |

This register identifies the MSB of the device ID. Value = 0x51.

### 2.20.36 LSB of Device ID Register

|         |     |
|---------|-----|
| Address | 81h |
| Default | 50h |

|                  |   |   |   |   |   |   |   |
|------------------|---|---|---|---|---|---|---|
| 7                | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| LSB of device ID |   |   |   |   |   |   |   |

This register identifies the LSB of the device ID. Value = 0x50.

### 2.20.37 ROM Major Version Register

|         |          |            |
|---------|----------|------------|
| Address | 82h      |            |
| Device  | TVP5150A | TVP5150AM1 |
| Default | 03h      | 04h        |

|                                |   |   |   |   |   |   |   |
|--------------------------------|---|---|---|---|---|---|---|
| 7                              | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| ROM major version <sup>†</sup> |   |   |   |   |   |   |   |

<sup>†</sup> This register can contain a number from 0x01 to 0xFF.

Value = 0x03 for TVP5150A

Value = 0x04 for TVP5150AM1

### 2.20.38 ROM Minor Version Register

|         |          |            |
|---------|----------|------------|
| Address | 83h      |            |
| Device  | TVP5150A | TVP5150AM1 |
| Default | 21h      | 00h        |

|                                |   |   |   |   |   |   |   |
|--------------------------------|---|---|---|---|---|---|---|
| 7                              | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| ROM minor version <sup>†</sup> |   |   |   |   |   |   |   |

<sup>†</sup> This register can contain a number from 0x01 to 0xFF.

Value = 0x21 for TVP5150A

Value = 0x00 for TVP5150AM1

### 2.20.39 Vertical Line Count MSB Register

|         |     |
|---------|-----|
| Address | 84h |
|---------|-----|

|          |   |   |   |   |   |                         |   |
|----------|---|---|---|---|---|-------------------------|---|
| 7        | 6 | 5 | 4 | 3 | 2 | 1                       | 0 |
| Reserved |   |   |   |   |   | Vertical line count MSB |   |

Vertical line count bits [9:8]

### 2.20.40 Vertical Line Count LSB Register

|         |     |
|---------|-----|
| Address | 85h |
|---------|-----|

|                         |   |   |   |   |   |   |   |
|-------------------------|---|---|---|---|---|---|---|
| 7                       | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Vertical line count LSB |   |   |   |   |   |   |   |

Vertical line count bits [7:0]

Registers 84h and 85h can be read and combined to extract the detected number of lines per frame. This can be used with nonstandard video signals such as a VCR in fast-forward or rewind modes to synchronize the downstream video circuitry.

## 2.20.41 Interrupt Status Register B

|         |     |
|---------|-----|
| Address | 86h |
|---------|-----|

| 7                       | 6                          | 5             | 4                  | 3                        | 2                  | 1                | 0              |
|-------------------------|----------------------------|---------------|--------------------|--------------------------|--------------------|------------------|----------------|
| Software initialization | Macrovision detect changed | Command ready | Field rate changed | Line alternation changed | Color lock changed | H/V lock changed | TV/VCR changed |

Software initialization:

0 = Software initialization is not ready (default).

1 = Software initialization is ready.

Macrovision detect changed:

0 = Macrovision detect status has not changed (default).

1 = Macrovision detect status has changed.

Command ready:

0 = TVP5150A is not ready to accept a new command (default).

1 = TVP5150A is ready to accept a new command.

Field rate changed:

0 = Field rate has not changed (default).

1 = Field rate has changed.

Line alternation changed:

0 = Line alteration has not changed (default).

1 = Line alternation has changed.

Color lock changed:

0 = Color lock status has not changed (default).

1 = Color lock status has changed.

H/V lock changed:

0 = H/V lock status has not changed (default).

1 = H/V lock status has changed.

TV/VCR changed:

0 = TV/VCR status has not changed (default).

1 = TV/VCR status has changed.

Interrupt status register B is polled by the external processor to determine the interrupt source for interrupt B. After an interrupt condition is set, it can be reset by writing to the interrupt reset register B at subaddress 1Ch with a 1 in the appropriate bit.

## 2.20.42 Interrupt Active Register B

|         |     |
|---------|-----|
| Address | 87h |
|---------|-----|

| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0           |
|----------|---|---|---|---|---|---|-------------|
| Reserved |   |   |   |   |   |   | Interrupt B |

Interrupt B:

0 = Interrupt B is not active on the external terminal (default).

1 = Interrupt B is active on the external terminal.

The interrupt active register B is polled by the external processor to determine if interrupt B is active.

### 2.20.43 Status Register #1

|         |     |
|---------|-----|
| Address | 88h |
|---------|-----|

| 7                        | 6                       | 5                 | 4                | 3                            | 2                         | 1                           | 0             |
|--------------------------|-------------------------|-------------------|------------------|------------------------------|---------------------------|-----------------------------|---------------|
| Peak white detect status | Line-alternating status | Field rate status | Lost lock detect | Color subcarrier lock status | Vertical sync lock status | Horizontal sync lock status | TV/VCR status |

Peak white detect status:

- 0 = Peak white is not detected.
- 1 = Peak white is detected.

Line-alternating status:

- 0 = Nonline alternating
- 1 = Line alternating

Field rate status:

- 0 = 60 Hz
- 1 = 50 Hz

Lost lock detect:

- 0 = No lost lock since status register #1 was last read.
- 1 = Lost lock since status register #1 was last read.

Color subcarrier lock status:

- 0 = Color subcarrier is not locked.
- 1 = Color subcarrier is locked.

Vertical sync lock status:

- 0 = Vertical sync is not locked.
- 1 = Vertical sync is locked.

Horizontal sync lock status:

- 0 = Horizontal sync is not locked.
- 1 = Horizontal sync is locked.

TV/VCR status. TV mode is determined by detecting standard line-to-line variations and specific chroma SCH phases based on the standard input video format. VCR mode is determined by detecting variations in the chroma SCH phases compared to the chroma SCH phases of the standard input video format.

- 0 = TV
- 1 = VCR

## 2.20.44 Status Register #2

|         |     |
|---------|-----|
| Address | 89h |
|---------|-----|

| 7        | 6                     | 5                   | 4                     | 3                            | 2                     | 1 | 0 |
|----------|-----------------------|---------------------|-----------------------|------------------------------|-----------------------|---|---|
| Reserved | Weak signal detection | PAL switch polarity | Field sequence status | AGC and offset frozen status | Macrovision detection |   |   |

Weak signal detection:

0 = No weak signal

1 = Weak signal mode

PAL switch polarity of first line of odd field:

0 = PAL switch is 0

1 = PAL switch is 1

Field sequence status:

0 = Even field

1 = Odd field

AGC and offset frozen status:

0 = AGC and offset are not frozen.

1 = AGC and offset are frozen.

Macrovision detection:

000 = No copy protection

001 = AGC process present (Macrovision Type 1 present)

010 = Colorstripe process Type 2 present

011 = AGC process and colorstripe process Type 2 present

100 = Reserved

101 = Reserved

110 = Colorstripe process Type 3 present

111 = AGC process and color stripe process Type 3 present

## 2.20.45 Status Register #3

|         |     |
|---------|-----|
| Address | 8Ah |
|---------|-----|

| 7                                                          | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------------------------------------------------------|---|---|---|---|---|---|---|
| Front-end AGC gain value (analog and digital) <sup>†</sup> |   |   |   |   |   |   |   |

<sup>†</sup> Represents 8 bits (MSB) of a 10-bit value

This register provides the front-end AGC gain value of both analog and digital gains.

## 2.20.46 Status Register #4

|         |     |
|---------|-----|
| Address | 8Bh |
|---------|-----|

|                                      |   |   |   |   |   |   |   |
|--------------------------------------|---|---|---|---|---|---|---|
| 7                                    | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Subcarrier to horizontal (SCH) phase |   |   |   |   |   |   |   |

SCH (color PLL subcarrier phase at 50% of the falling edge of horizontal sync of line one of odd field; step size 360°/256):

0000 0000 = 0.00°

0000 0001 = 1.41°

0000 0010 = 2.81°

1111 1110 = 357.2°

1111 1111 = 358.6°

## 2.20.47 Status Register #5

|         |     |
|---------|-----|
| Address | 8Ch |
|---------|-----|

|                 |          |   |   |                |   |   |               |
|-----------------|----------|---|---|----------------|---|---|---------------|
| 7               | 6        | 5 | 4 | 3              | 2 | 1 | 0             |
| Autoswitch mode | Reserved |   |   | Video standard |   |   | Sampling rate |

This register contains information about the detected video standard and the sampling rate at which the device is currently operating. When autoswitch code is running, this register must be tested to determine which video standard has been detected.

Autoswitch mode:

0 = Stand-alone (forced video standard) mode

1 = Autoswitch mode

Video standard:

| VIDEO STANDARD [3:1] |      |      | SR    | VIDEO STANDARD                   |
|----------------------|------|------|-------|----------------------------------|
| BIT 3                | BIT2 | BIT1 | BIT 0 |                                  |
| 0                    | 0    | 0    | 0     | Reserved                         |
| 0                    | 0    | 0    | 1     | (M) NTSC ITU-R BT.601            |
| 0                    | 0    | 1    | 0     | Reserved                         |
| 0                    | 0    | 1    | 1     | (B, G, H, I, N) PAL ITU-R BT.601 |
| 0                    | 1    | 0    | 0     | Reserved                         |
| 0                    | 1    | 0    | 1     | (M) PAL ITU-R BT.601             |
| 0                    | 1    | 1    | 0     | Reserved                         |
| 0                    | 1    | 1    | 1     | PAL-N ITU-R BT.601               |
| 1                    | 0    | 0    | 0     | Reserved                         |
| 1                    | 0    | 0    | 1     | NTSC 4.43 ITU-R BT.601           |
| 1                    | 0    | 1    | 0     | Reserved                         |
| 1                    | 0    | 1    | 1     | SECAM ITU-R BT.601               |

Sampling rate (SR):

0 = Reserved

1 = ITU-R BT.601

## 2.20.48 Closed Caption Data Registers

|         |         |
|---------|---------|
| Address | 90h–93h |
|---------|---------|

| Address | 7                             | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|-------------------------------|---|---|---|---|---|---|---|
| 90h     | Closed caption field 1 byte 1 |   |   |   |   |   |   |   |
| 91h     | Closed caption field 1 byte 2 |   |   |   |   |   |   |   |
| 92h     | Closed caption field 2 byte 1 |   |   |   |   |   |   |   |
| 93h     | Closed caption field 2 byte 2 |   |   |   |   |   |   |   |

These registers contain the closed caption data arranged in bytes per field.

## 2.20.49 WSS Data Registers

|         |         |
|---------|---------|
| Address | 94h–99h |
|---------|---------|

NTSC

| ADDRESS | 7   | 6   | 5   | 4   | 3   | 2   | 1   | 0   | BYTE               |
|---------|-----|-----|-----|-----|-----|-----|-----|-----|--------------------|
| 94h     |     |     | b5  | b4  | b3  | b2  | b1  | b0  | WSS field 1 byte 1 |
| 95h     | b13 | b12 | b11 | b10 | b9  | b8  | b7  | b6  | WSS field 1 byte 2 |
| 96h     |     |     | b19 | b18 | b17 | b16 | b15 | b14 | WSS field 1 byte 3 |
| 97h     |     |     | b5  | b4  | b3  | b2  | b1  | b0  | WSS field 2 byte 1 |
| 98h     | b13 | b12 | b11 | b10 | b9  | b8  | b7  | b6  | WSS field 2 byte 2 |
| 99h     |     |     | b19 | b18 | b17 | b16 | b15 | b14 | WSS field 2 byte 3 |

These registers contain the wide screen signaling (WSS) data for NTSC.

- Bits 0–1 represent word 0, aspect ratio
- Bits 2–5 represent word 1, header code for word 2
- Bits 6–13 represent word 2, copy control
- Bits 14–19 represent word 3, CRC

PAL/SECAM

| ADDRESS | 7        | 6  | 5   | 4   | 3   | 2   | 1  | 0  | BYTE               |
|---------|----------|----|-----|-----|-----|-----|----|----|--------------------|
| 94h     | b7       | b6 | b5  | b4  | b3  | b2  | b1 | b0 | WSS field 1 byte 1 |
| 95h     |          |    | b13 | b12 | b11 | b10 | b9 | b8 | WSS field 1 byte 2 |
| 96h     | Reserved |    |     |     |     |     |    |    |                    |
| 97h     | b7       | b6 | b5  | b4  | b3  | b2  | b1 | b0 | WSS field 2 byte 1 |
| 98h     |          |    | b13 | b12 | b11 | b10 | b9 | b8 | WSS field 2 byte 2 |
| 99h     | Reserved |    |     |     |     |     |    |    |                    |

PAL/SECAM:

- Bits 0–3 represent group 1, aspect ratio
- Bits 4–7 represent group 2, enhanced services
- Bits 8–10 represent group 3, subtitles
- Bits 11–13 represent group 4, others

## 2.20.50 VPS Data Registers

|         |         |
|---------|---------|
| Address | 9Ah–A6h |
|---------|---------|

| ADDRESS | 7           | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|-------------|---|---|---|---|---|---|---|
| 9Ah     | VPS byte 1  |   |   |   |   |   |   |   |
| 9Bh     | VPS byte 2  |   |   |   |   |   |   |   |
| 9Ch     | VPS byte 3  |   |   |   |   |   |   |   |
| 9Dh     | VPS byte 4  |   |   |   |   |   |   |   |
| 9Eh     | VPS byte 5  |   |   |   |   |   |   |   |
| 9Fh     | VPS byte 6  |   |   |   |   |   |   |   |
| A0h     | VPS byte 7  |   |   |   |   |   |   |   |
| A1h     | VPS byte 8  |   |   |   |   |   |   |   |
| A2h     | VPS byte 9  |   |   |   |   |   |   |   |
| A3h     | VPS byte 10 |   |   |   |   |   |   |   |
| A4h     | VPS byte 11 |   |   |   |   |   |   |   |
| A5h     | VPS byte 12 |   |   |   |   |   |   |   |
| A6h     | VPS byte 13 |   |   |   |   |   |   |   |

These registers contain the entire VPS data line except the clock run-in code or the start code.

## 2.20.51 VITC Data Registers

|         |         |
|---------|---------|
| Address | A7h–AFh |
|---------|---------|

| ADDRESS | 7                           | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|-----------------------------|---|---|---|---|---|---|---|
| A7h     | VITC byte 1, frame byte 1   |   |   |   |   |   |   |   |
| A8h     | VITC byte 2, frame byte 2   |   |   |   |   |   |   |   |
| A9h     | VITC byte 3, seconds byte 1 |   |   |   |   |   |   |   |
| AAh     | VITC byte 4, seconds byte 2 |   |   |   |   |   |   |   |
| ABh     | VITC byte 5, minutes byte 1 |   |   |   |   |   |   |   |
| ACh     | VITC byte 6, minutes byte 2 |   |   |   |   |   |   |   |
| ADh     | VITC byte 7, hour byte 1    |   |   |   |   |   |   |   |
| A Eh    | VITC byte 8, hour byte 2    |   |   |   |   |   |   |   |
| AFh     | VITC byte 9, CRC            |   |   |   |   |   |   |   |

These registers contain the VITC data.

## 2.20.52 VBI FIFO Read Data Register

|         |     |
|---------|-----|
| Address | B0h |
|---------|-----|

| 7              | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|----------------|---|---|---|---|---|---|---|
| FIFO read data |   |   |   |   |   |   |   |

This address is provided to access VBI data in the FIFO through the host port. All forms of teletext data come directly from the FIFO, while all other forms of VBI data can be programmed to come from the registers or from the FIFO. Current status of the FIFO can be found at address C6h and the number of bytes in the FIFO is located at address C7h. If the host port is to be used to read data from the FIFO, then the output formatter must be disabled at address CDh bit 0. The format used for the VBI FIFO is shown in Section 2.9.

## 2.20.53 Teletext Filter and Mask Registers

|         |         |
|---------|---------|
| Address | B1h–BAh |
| Default | 00h     |

| ADDRESS | 7               | 6 | 5 | 4 | 3                  | 2 | 1 | 0 |
|---------|-----------------|---|---|---|--------------------|---|---|---|
| B1h     | Filter 1 mask 1 |   |   |   | Filter 1 pattern 1 |   |   |   |
| B2h     | Filter 1 mask 2 |   |   |   | Filter 1 pattern 2 |   |   |   |
| B3h     | Filter 1 mask 3 |   |   |   | Filter 1 pattern 3 |   |   |   |
| B4h     | Filter 1 mask 4 |   |   |   | Filter 1 pattern 4 |   |   |   |
| B5h     | Filter 1 mask 5 |   |   |   | Filter 1 pattern 5 |   |   |   |
| B6h     | Filter 2 mask 1 |   |   |   | Filter 2 pattern 1 |   |   |   |
| B7h     | Filter 2 mask 2 |   |   |   | Filter 2 pattern 2 |   |   |   |
| B8h     | Filter 2 mask 3 |   |   |   | Filter 2 pattern 3 |   |   |   |
| B9h     | Filter 2 mask 4 |   |   |   | Filter 2 pattern 4 |   |   |   |
| BAh     | Filter 2 mask 5 |   |   |   | Filter 2 pattern 5 |   |   |   |

For an NABTS system, the packet prefix consists of five bytes. Each byte contains four data bits (D[3:0]) interlaced with four Hamming protection bits (H[3:0]):

| Bit 7 | Bit 6 | Bit 5 | Bit 4 | Bit 3 | Bit 2 | Bit 1 | Bit 0 |
|-------|-------|-------|-------|-------|-------|-------|-------|
| D[3]  | H[3]  | D[2]  | H[2]  | D[1]  | H[1]  | D[0]  | H[0]  |

Only the data portion D[3:0] from each byte is applied to a teletext filter function with the corresponding pattern bits P[3:0] and mask bits M[3:0]. Hamming protection bits are ignored by the filter.

For a WST system (PAL or NTSC), the packet prefix consists of two bytes so that two patterns are used. Patterns 3, 4, and 5 are ignored.

The mask bits enable filtering using the corresponding bit in the pattern register. For example, a 1 in the LSB of mask 1 means that the filter module must compare the LSB of nibble 1 in the pattern register to the first data bit on the transaction. If these match, then a true result is returned. A 0 in a bit of mask 1 means that the filter module must ignore that data bit of the transaction. If all 0s are programmed in the mask bits, then the filter matches all patterns returning a true result (default 00h).

Pattern and mask for each byte and filter are referred as <1,2><P,M><1,2,3,4,5> where:

- <1,2> identifies the filter 1 or 2
- <P,M> identifies the pattern or mask
- <1,2,3,4,5> identifies the byte number

### 2.20.54 Teletext Filter Control Register

|         |     |
|---------|-----|
| Address | BBh |
| Default | 00h |

| 7        | 6 | 5 | 4            | 3 | 2    | 1                   | 0                   |
|----------|---|---|--------------|---|------|---------------------|---------------------|
| Reserved |   |   | Filter logic |   | Mode | TTX filter 2 enable | TTX filter 1 enable |

Filter logic: allows different logic to be applied when combining the decision of filter 1 and filter 2 as follows:

00 = NOR (Default)

01 = NAND

10 = OR

11 = AND

Mode:

0 = Teletext WST PAL mode B (2 header bytes) (default)

1 = Teletext NABTS NTSC mode C (5 header bytes)

TTX filter 2 enable:

0 = Disabled (default)

1 = Enabled

TTX filter 1 enable:

0 = Disabled (default)

1 = Enabled

If the filter matches or if the filter mask is all 0s, then a true result is returned.

## 2.20.55 Interrupt Status Register A

|         |     |
|---------|-----|
| Address | C0h |
| Default | 00h |

| 7                    | 6              | 5        | 4 | 3 | 2                        | 1              | 0              |
|----------------------|----------------|----------|---|---|--------------------------|----------------|----------------|
| Lock state interrupt | Lock interrupt | Reserved |   |   | FIFO threshold interrupt | Line interrupt | Data interrupt |

The interrupt status register A can be polled by the host processor to determine the source of an interrupt. After an interrupt condition is set it can be reset by writing to this register with a 1 in the appropriate bit(s).

Lock state interrupt:

0 = TVP5150A is not locked to the video signal (default).

1 = TVP5150A is locked to the video signal.

Lock interrupt:

0 = A transition has not occurred on the lock signal (default).

1 = A transition has occurred on the lock signal.

FIFO threshold interrupt:

0 = The amount of data in the FIFO has not yet crossed the threshold programmed at address C8h (default).

1 = The amount of data in the FIFO has crossed the threshold programmed at address C8h.

Line interrupt:

0 = The video line number has not yet been reached (default).

1 = The video line number programmed in address CAh has occurred.

Data interrupt:

0 = No data is available (default).

1 = VBI data is available either in the FIFO or in the VBI data registers.

## 2.20.56 Interrupt Enable Register A

|         |     |
|---------|-----|
| Address | C1h |
| Default | 00h |

| 7        | 6                     | 5                               | 4                          | 3        | 2                               | 1                     | 0                     |
|----------|-----------------------|---------------------------------|----------------------------|----------|---------------------------------|-----------------------|-----------------------|
| Reserved | Lock interrupt enable | Cycle complete interrupt enable | Bus error interrupt enable | Reserved | FIFO threshold interrupt enable | Line interrupt enable | Data interrupt enable |

The interrupt enable register A is used by the host processor to mask unnecessary interrupt sources. Bits loaded with a 1 allow the corresponding interrupt condition to generate an interrupt on the external pin. Conversely, bits loaded with a 0 mask the corresponding interrupt condition from generating an interrupt on the external pin. This register only affects the interrupt on the external terminal, it does not affect the bits in interrupt status register A. A given condition can set the appropriate bit in the status register and not cause an interrupt on the external terminal. To determine if this device is driving the interrupt terminal either perform a logical AND of interrupt status register A with interrupt enable register A, or check the state of the interrupt A bit in the interrupt configuration register at address C2h.

Lock interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

Cycle complete interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

Bus error interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

FIFO threshold interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

Line interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

Data interrupt enable:

- 0 = Disabled (default)
- 1 = Enabled

## 2.20.57 Interrupt Configuration Register A

|         |     |
|---------|-----|
| Address | C2h |
| Default | 04h |

| 7        | 6 | 5 | 4 | 3 | 2                    | 1           | 0                    |
|----------|---|---|---|---|----------------------|-------------|----------------------|
| Reserved |   |   |   |   | YCbCr enable (VDPOE) | Interrupt A | Interrupt polarity A |

YCbCr enable (VDPOE):

0 = YCbCr pins are high impedance.

1 = YCbCr pins are active if other conditions are met (default).

Interrupt A (read-only):

0 = Interrupt A is not active on the external pin (default).

1 = Interrupt A is active on the external pin.

Interrupt polarity A:

0 = Interrupt A is active low (default).

1 = Interrupt A is active high.

Interrupt configuration register A is used to configure the polarity of the external interrupt terminal. When interrupt A is configured as active low, the terminal is driven low when active and high-impedance when inactive (open collector). Conversely, when the terminal is configured as active high, it is driven high when active and driven low when inactive.

## 2.20.58 VDP Configuration RAM Register

|         |     |     |     |
|---------|-----|-----|-----|
| Address | C3h | C4h | C5h |
| Default | DCh | 0Fh | 00h |

| Address | 7                  | 6 | 5 | 4 | 3 | 2 | 1 | 0             |
|---------|--------------------|---|---|---|---|---|---|---------------|
| C3h     | Configuration data |   |   |   |   |   |   |               |
| C4h     | RAM address (7:0)  |   |   |   |   |   |   |               |
| C5h     | Reserved           |   |   |   |   |   |   | RAM address 8 |

The configuration RAM data is provided to initialize the VDP with initial constants. The configuration RAM is 512 bytes organized as 32 different configurations of 16 bytes each. The first 12 configurations are defined for the current VBI standards. An additional 2 configurations can be used as a custom programmed mode for unique standards like Gemstar.

Address C3h is used to read or write to the RAM. The RAM internal address counter is automatically incremented with each transaction. Addresses C5h and C4h make up a 9-bit address to load the internal address counter with a specific start address. This can be used to write a subset of the RAM for only those standards of interest. Registers D0h–FBh must all be programmed with FFh, before writing or reading the configuration RAM. Full field mode (CFh) must be disabled as well.

The suggested RAM contents are shown below. All values are hexadecimal.

**Table 2–13. VBI Configuration RAM For Signals With Pedestal**

| Index             | Address | 0            | 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  | 9  | A  | B | C | D | E  | F |
|-------------------|---------|--------------|----|----|----|----|----|----|----|----|----|----|---|---|---|----|---|
| Reserved          | 000     | Reserved     |    |    |    |    |    |    |    |    |    |    |   |   |   |    |   |

## 2.20.59 VDP Status Register

|         |     |
|---------|-----|
| Address | C6h |
|---------|-----|

| 7               | 6          | 5             | 4                    | 3                    | 2             | 1             | 0              |
|-----------------|------------|---------------|----------------------|----------------------|---------------|---------------|----------------|
| FIFO full error | FIFO empty | TTX available | CC field 1 available | CC field 2 available | WSS available | VPS available | VITC available |

The VDP status register indicates whether data is available in either the FIFO or data registers, and status information about the FIFO. Reading data from the corresponding register does not clear the status flags automatically. These flags are only reset by writing a 1 to the respective bit. However, bit 6 is updated automatically.

FIFO full error:

- 0 = No FIFO full error
- 1 = FIFO was full during a write to FIFO.

The FIFO full error flag is set when the current line of VBI data can not enter the FIFO. For example, if the FIFO has only 10 bytes left and teletext is the current VBI line, the FIFO full error flag is set, but no data is written because the entire teletext line will not fit. However, if the next VBI line is closed caption requiring only 2 bytes of data plus the header, this goes into the FIFO. Even if the full error flag is set.

FIFO empty:

- 0 = FIFO is not empty.
- 1 = FIFO is empty.

TTX available:

- 0 = Teletext data is not available.
- 1 = Teletext data is available.

CC field 1 available:

- 0 = Closed caption data from field 1 is not available.
- 1 = Closed caption data from field 1 is available.

CC field 2 available:

- 0 = Closed caption data from field 2 is not available.
- 1 = Closed caption data from field 2 is available.

WSS available:

- 0 = WSS data is not available.
- 1 = WSS data is available.

VPS available:

- 0 = VPS data is not available.
- 1 = VPS data is available.

VITC available:

- 0 = VITC data is not available.
- 1 = VITC data is available.

## 2.20.60 FIFO Word Count Register

|         |     |
|---------|-----|
| Address | C7h |
|---------|-----|

| 7               | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------------|---|---|---|---|---|---|---|
| Number of words |   |   |   |   |   |   |   |

This register provides the number of words in the FIFO. 1 word equals 2 bytes.

### 2.20.61 FIFO Interrupt Threshold Register

|         |     |
|---------|-----|
| Address | C8h |
| Default | 80h |

|                 |   |   |   |   |   |   |   |
|-----------------|---|---|---|---|---|---|---|
| 7               | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Number of words |   |   |   |   |   |   |   |

This register is programmed to trigger an interrupt when the number of words in the FIFO exceeds this value (default 80h). This interrupt must be enabled at address C1h. 1 word equals 2 bytes.

### 2.20.62 FIFO Reset Register

|         |     |
|---------|-----|
| Address | C9h |
| Default | 00h |

|          |   |   |   |   |   |   |   |
|----------|---|---|---|---|---|---|---|
| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Any data |   |   |   |   |   |   |   |

Writing any data to this register resets the FIFO and clears any data present.

### 2.20.63 Line Number Interrupt Register

|         |     |
|---------|-----|
| Address | CAh |
| Default | 00h |

|                |                |             |   |   |   |   |   |
|----------------|----------------|-------------|---|---|---|---|---|
| 7              | 6              | 5           | 4 | 3 | 2 | 1 | 0 |
| Field 1 enable | Field 2 enable | Line number |   |   |   |   |   |

This register is programmed to trigger an interrupt when the video line number matches this value in bits 5:0. This interrupt must be enabled at address C1h. The value of 0 or 1 does not generate an interrupt.

Field 1 enable:

- 0 = Disabled (default)
- 1 = Enabled

Field 2 enable:

- 0 = Disabled (default)
- 1 = Enabled

Line number: (default 00h)

### 2.20.64 Pixel Alignment Registers

|         |     |     |
|---------|-----|-----|
| Address | CBh | CCh |
| Default | 4Eh | 00h |

|         |                    |   |   |   |   |   |                    |   |
|---------|--------------------|---|---|---|---|---|--------------------|---|
| Address | 7                  | 6 | 5 | 4 | 3 | 2 | 1                  | 0 |
| CBh     | Switch pixel [7:0] |   |   |   |   |   |                    |   |
| CCh     | Reserved           |   |   |   |   |   | Switch pixel [9:8] |   |

These registers form a 10-bit horizontal pixel position from the falling edge of sync, where the VDP controller initiates the program from one line standard to the next line standard; for example, the previous line of teletext to the next line of closed caption. This value must be set so that the switch occurs after the previous transaction has cleared the delay in the VDP, but early enough to allow the new values to be programmed before the current settings are required.

### 2.20.65 FIFO Output Control Register

|         |     |
|---------|-----|
| Address | CDh |
| Default | 01h |

|          |   |   |   |   |   |   |                    |
|----------|---|---|---|---|---|---|--------------------|
| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0                  |
| Reserved |   |   |   |   |   |   | Host access enable |

This register is programmed to allow I<sup>2</sup>C access to the FIFO or allowing all VDP data to go out the video port.

Host access enable:

0 = Output FIFO data to the video output Y[9:2]

1 = Allow I<sup>2</sup>C access to the FIFO data (default)

### 2.20.66 Full Field Enable Register

|         |     |
|---------|-----|
| Address | CFh |
| Default | 00h |

|          |   |   |   |   |   |   |                   |
|----------|---|---|---|---|---|---|-------------------|
| 7        | 6 | 5 | 4 | 3 | 2 | 1 | 0                 |
| Reserved |   |   |   |   |   |   | Full field enable |

This register enables the full field mode. In this mode, all lines outside the vertical blank area and all lines in the line mode registers programmed with FFh are sliced with the definition of register FCh. Values other than FFh in the line mode registers allow a different slice mode for that particular line.

Full field enable:

0 = Disable full field mode (default)

1 = Enable full field mode

## 2.20.67 Line Mode Registers

|         |     |         |
|---------|-----|---------|
| Address | D0h | D1h–FBh |
| Default | 00h | FFh     |

| ADDRESS | 7               | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|-----------------|---|---|---|---|---|---|---|
| D0h     | Line 6 Field 1  |   |   |   |   |   |   |   |
| D1h     | Line 6 Field 2  |   |   |   |   |   |   |   |
| D2h     | Line 7 Field 1  |   |   |   |   |   |   |   |
| D3h     | Line 7 Field 2  |   |   |   |   |   |   |   |
| D4h     | Line 8 Field 1  |   |   |   |   |   |   |   |
| D5h     | Line 8 Field 2  |   |   |   |   |   |   |   |
| D6h     | Line 9 Field 1  |   |   |   |   |   |   |   |
| D7h     | Line 9 Field 2  |   |   |   |   |   |   |   |
| D8h     | Line 10 Field 1 |   |   |   |   |   |   |   |
| D9h     | Line 10 Field 2 |   |   |   |   |   |   |   |
| DAh     | Line 11 Field 1 |   |   |   |   |   |   |   |
| DBh     | Line 11 Field 2 |   |   |   |   |   |   |   |
| DCh     | Line 12 Field 1 |   |   |   |   |   |   |   |
| DDh     | Line 12 Field 2 |   |   |   |   |   |   |   |
| DEh     | Line 13 Field 1 |   |   |   |   |   |   |   |
| DFh     | Line 13 Field 2 |   |   |   |   |   |   |   |
| E0h     | Line 14 Field 1 |   |   |   |   |   |   |   |
| E1h     | Line 14 Field 2 |   |   |   |   |   |   |   |
| E2h     | Line 15 Field 1 |   |   |   |   |   |   |   |
| E3h     | Line 15 Field 2 |   |   |   |   |   |   |   |
| E4h     | Line 16 Field 1 |   |   |   |   |   |   |   |
| E5h     | Line 16 Field 2 |   |   |   |   |   |   |   |
| E6h     | Line 17 Field 1 |   |   |   |   |   |   |   |
| E7h     | Line 17 Field 2 |   |   |   |   |   |   |   |
| E8h     | Line 18 Field 1 |   |   |   |   |   |   |   |
| E9h     | Line 18 Field 2 |   |   |   |   |   |   |   |
| EAh     | Line 19 Field 1 |   |   |   |   |   |   |   |
| EBh     | Line 19 Field 2 |   |   |   |   |   |   |   |
| ECh     | Line 20 Field 1 |   |   |   |   |   |   |   |
| EDh     | Line 20 Field 2 |   |   |   |   |   |   |   |
| EEh     | Line 21 Field 1 |   |   |   |   |   |   |   |
| EFh     | Line 21 Field 2 |   |   |   |   |   |   |   |
| F0h     | Line 22 Field 1 |   |   |   |   |   |   |   |
| F1h     | Line 22 Field 2 |   |   |   |   |   |   |   |
| F2h     | Line 23 Field 1 |   |   |   |   |   |   |   |
| F3h     | Line 23 Field 2 |   |   |   |   |   |   |   |
| F4h     | Line 24 Field 1 |   |   |   |   |   |   |   |
| F5h     | Line 24 Field 2 |   |   |   |   |   |   |   |
| F6h     | Line 25 Field 1 |   |   |   |   |   |   |   |
| F7h     | Line 25 Field 2 |   |   |   |   |   |   |   |
| F8h     | Line 26 Field 1 |   |   |   |   |   |   |   |
| F9h     | Line 26 Field 2 |   |   |   |   |   |   |   |
| FAh     | Line 27 Field 1 |   |   |   |   |   |   |   |
| FBh     | Line 27 Field 2 |   |   |   |   |   |   |   |

These registers program the specific VBI standard at a specific line in the video field.

Bit 7:

- 0 = Disable filtering of null bytes in closed caption modes
- 1 = Enable filtering of null bytes in closed caption modes (default)

In teletext modes, bit 7 enables the data filter function for that particular line. If it is set to 0, then the data filter passes all data on that line.

Bit 6:

- 0 = Send VBI data to registers only.
- 1 = Send VBI data to FIFO and the registers. Teletext data only goes to FIFO. (default)

Bit 5:

- 0 = Allow VBI data with errors in the FIFO
- 1 = Do not allow VBI data with errors in the FIFO (default)

Bit 4:

- 0 = Do not enable error detection and correction
- 1 = Enable error detection and correction (when bits [3:0] = 1 2, 3, and 4 only) (default)

Bits [3:0]:

- 0000 = WST SECAM
- 0001 = WST PAL B
- 0010 = WST PAL C
- 0011 = WST NTSC
- 0100 = NABTS NTSC
- 0101 = TTX NTSC
- 0110 = CC PAL
- 0111 = CC NTSC
- 1000 = WSS PAL
- 1001 = WSS NTSC
- 1010 = VITC PAL
- 1011 = VITC NTSC
- 1100 = VPS PAL
- 1101 = Custom 1
- 1110 = Custom 2
- 1111 = Active video (VDP off) (default)

A value of FFh in the line mode registers is required for any line to be sliced as part of the full field mode.

## 2.20.68 Full Field Mode Register

|         |     |
|---------|-----|
| Address | FCh |
| Default | 7Fh |

|                 |   |   |   |   |   |   |   |
|-----------------|---|---|---|---|---|---|---|
| 7               | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Full field mode |   |   |   |   |   |   |   |

This register programs the specific VBI standard for full field mode. It can be any VBI standard. Individual line settings take priority over the full field register. This allows each VBI line to be programmed independently but have the remaining lines in full field mode. The full field mode register has the same definitions as the line mode registers (default 7Fh).

## 3 Electrical Specifications

### 3.1 Absolute Maximum Ratings Over Operating Free-Air Temperature Range (unless otherwise noted)<sup>†</sup>

|                                             |                      |                 |
|---------------------------------------------|----------------------|-----------------|
| Supply voltage range:                       | IO_DVDD to DGND      | –0.5 V to 4.5 V |
|                                             | DVDD to DGND         | –0.5 V to 2.3 V |
|                                             | PLL_AVDD to PLL_AGND | –0.5 V to 2.3 V |
|                                             | CH_AVDD to CH_AGND   | –0.5 V to 2.3 V |
| Digital input voltage range, $V_I$ to DGND  |                      | –0.5 V to 4.5 V |
| Input voltage range, XTAL1 to PLL_GND       |                      | –0.5 V to 2.3 V |
| Analog input voltage range $A_I$ to CH_AGND |                      | –0.2 V to 2.0 V |
| Digital output voltage range, $V_O$ to DGND |                      | –0.5 V to 4.5 V |
| Operating free-air temperature, $T_A$       |                      | 0°C to 70°C     |
| Storage temperature, $T_{stg}$              |                      | –65°C to 150°C  |

<sup>†</sup> Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 3.2 Recommended Operating Conditions

|                |                                              | MIN          | NOM          | MAX  | UNIT |
|----------------|----------------------------------------------|--------------|--------------|------|------|
| IO_DVDD        | Digital I/O supply voltage                   | 3.0          | 3.3          | 3.6  | V    |
| DVDD           | Digital supply voltage                       | 1.65         | 1.8          | 2.0  | V    |
| PLL_AVDD       | Analog PLL supply voltage                    | 1.65         | 1.8          | 2.0  | V    |
| CH_AVDD        | Analog core supply voltage                   | 1.65         | 1.8          | 2.0  | V    |
| $V_{I(P-P)}$   | Analog input voltage (ac-coupling necessary) | 0            |              | 0.75 | V    |
| $V_{IH}$       | Digital input voltage high                   | 0.7 IO_DVDD  |              |      | V    |
| $V_{IL}$       | Digital input voltage low                    |              | 0.3 IO_DVDD  |      | V    |
| $V_{IH\_XTAL}$ | XTAL input voltage high                      | 0.7 PLL_AVDD |              |      | V    |
| $V_{IL\_XTAL}$ | XTAL input voltage low                       |              | 0.3 PLL_AVDD |      | V    |
| $I_{OH}$       | High-level output current                    |              |              | 2    | mA   |
| $I_{OL}$       | Low-level output current                     |              |              | –2   | mA   |
| $I_{OH\_SCLK}$ | SCLK high-level output current               |              |              | 4    | mA   |
| $I_{OL\_SCLK}$ | SCLK low-level output current                |              |              | –4   | mA   |
| $T_A$          | Operating free-air temperature               | 0            |              | 70   | °C   |

#### 3.2.1 Crystal Specifications

| CRYSTAL SPECIFICATIONS | MIN | NOM      | MAX | UNIT |
|------------------------|-----|----------|-----|------|
| Frequency              |     | 14.31818 |     | MHz  |
| Frequency tolerance    |     | ±50      |     | ppm  |

### 3.3 Electrical Characteristics

DVDD = 1.8 V, PLL\_AVDD = 1.8 V, CH\_AVDD = 1.8 V, IO\_DVDD = 3.3 V

For minimum/maximum values:  $T_A = 0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ , and for typical values:  $T_A = 25^{\circ}\text{C}$  unless otherwise noted

#### 3.3.1 DC Electrical Characteristics

| PARAMETER               | TEST CONDITIONS<br>(see NOTE 1)                          | MIN                     | TYP          | MAX      | UNIT          |
|-------------------------|----------------------------------------------------------|-------------------------|--------------|----------|---------------|
| $I_{DD}(\text{IO\_D})$  | 3.3-V I/O digital supply current                         |                         | 4.8          |          | mA            |
| $I_{DD}(\text{D})$      | 1.8-V digital supply current                             |                         | 25.3         |          | mA            |
| $I_{DD}(\text{PLL\_A})$ | 1.8-V analog PLL supply current                          |                         | 5.4          |          | mA            |

| $C_i$                   | Input capacitance                                        | By design               | 8            |          | pF            |
| $V_{OH}$                | Output voltage high                                      | $I_{OH} = 2\text{ mA}$  | 0.8 IO_DVDD  |          | V             |
| $V_{OL}$                | Output voltage low                                       | $I_{OL} = -2\text{ mA}$ | 0.22 IO_DVDD |          | V             |
| $V_{OH\_SCLK}$          | SCLK output voltage high                                 | $I_{OH} = 4\text{ mA}$  | 0.8 IO_DVDD  |          | V             |
| $V_{OL\_SCLK}$          | SCLK output voltage low                                  | $I_{OL} = -2\text{ mA}$ | 0.22 IO_DVDD |          | V             |
| $I_{IH}$                | High-level input current                                 | $V_I = V_{IH}$          |              | $\pm 20$ | $\mu\text{A}$ |
| $I_{IL}$                | Low-level input current                                  | $V_I = V_{IL}$          |              | $\pm 20$ | $\mu\text{A}$ |

NOTES: 1. Measured with a load of 15 pF.  
2. Assured by device characterization.

#### 3.3.2 Analog Processing and A/D Converters

| PARAMETER        | TEST CONDITIONS                        | MIN | TYP       | MAX  | UNIT       |
|------------------|----------------------------------------|-----|-----------|------|------------|
| $Z_i$            | Input impedance, analog video inputs   |     | 500       |      | k $\Omega$ |
| $C_i$            | Input capacitance, analog video inputs |     | 10        |      | pF         |
| $V_i(\text{pp})$ | Input voltage range <sup>†</sup>       |     |           | 0.75 | V          |
| $\Delta G$       | Gain control range                     |     |           | 12   | dB         |
| DNL              | DC differential nonlinearity           |     | $\pm 0.5$ |      | LSB        |
| INL              | DC integral nonlinearity               |     | $\pm 1$   |      | LSB        |
| $F_r$            | Frequency response                     |     | -0.9      | -3   | dB         |
| SNR              | Signal-to-noise ratio                  |     | 50        |      | dB         |
| NS               | Noise spectrum                         |     | 50        |      | dB         |
| DP               | Differential phase                     |     | 1.5       |      | $^{\circ}$ |
| DG               | Differential gain                      |     | 0.5%      |      |            |

<sup>†</sup> The 0.75-V maximum applies to the sync-chroma amplitude, not sync-white. The recommended termination resistors are 37.4  $\Omega$  as seen in Chapter 5.

### 3.3.3 Timing

#### 3.3.3.1 Clocks, Video Data, Sync Timing

| PARAMETER       |                   | TEST CONDITIONS<br>(see NOTE 2) | MIN | TYP  | MAX | UNIT |
|-----------------|-------------------|---------------------------------|-----|------|-----|------|
| Duty cycle PCLK |                   |                                 |     | 50%  |     |      |
| $t_1$           | PCLK high time    |                                 |     | 18.5 |     | ns   |
| $t_2$           | PCLK low time     |                                 |     | 18.5 |     | ns   |
| $t_3$           | PCLK fall time    | 10% to 90%                      |     | 4    |     | ns   |
| $t_4$           | PCLK rise time    | 90% to 10%                      |     | 4    |     | ns   |
| $t_5$           | Output hold time  |                                 | 2   |      |     | ns   |
| $t_6$           | Output delay time |                                 |     | 3    | 8   | ns   |

NOTE 3: Measured with a load of 15 pF.

## 4 Example Register Settings

The following example register settings are provided only as a reference. These settings, given the assumed input connector, video format, and output format, set up the TVP5150A decoder and provide video output. Example register settings for other features and the VBI data processor are not provided here.

### 4.1 Example 1

#### 4.1.1 Assumptions

Device: TVP5150AM1  
Input connector: Composite (AIP1A)  
Video format: NTSC-M, PAL (B, G, H, I), or SECAM

**NOTE:** NTSC-443, PAL-N, and PAL-M are masked from the autoswitch process by default. See the autoswitch mask register at address 04h.

Output format: 8-bit ITU-R BT.656 with embedded syncs

#### 4.1.2 Recommended Settings

Recommended I<sup>2</sup>C writes: For this setup, only one write is required. All other registers are set up by default.

I<sup>2</sup>C register address 03h = Miscellaneous controls register address  
I<sup>2</sup>C data 09h = Enables YCbCr output and the clock output

**NOTE:** HSYNC, VSYNC/PALI, AVID, and FID/GLCO are high impedance by default. See the miscellaneous control register at address 03h.

### 4.2 Example 2

#### 4.2.1 Assumptions

Device: TVP5150AM1  
Input connector: S-video (AIP1A (luma), AIP1B (chroma))  
Video format: NTSC-M, 443, PAL (B, G, H, I, M, N) or SECAM (B, D, G, K, KI, L)  
Output format: 8-bit 4:2:2 YCbCr with discrete sync outputs

#### 4.2.2 Recommended Settings

Recommended I<sup>2</sup>C writes: This setup requires additional writes to output the discrete sync 4:2:2 data outputs, the HSYNC, and the VSYNC, and to autoswitch between all video formats mentioned above.

I<sup>2</sup>C register address 00h = Video input source selection #1 register  
I<sup>2</sup>C data 01h = Selects the S-Video input, AIP1A (luma), and AIP1B (chroma)

I<sup>2</sup>C register address 03h = Miscellaneous controls register address  
I<sup>2</sup>C data 0Dh = Enables the YCbCr output data, HSYNC, VSYNC/PALI, AVID, and FID/GLCO

I<sup>2</sup>C register address 04h = Autoswitch mask register  
I<sup>2</sup>C data C0h = Unmask NTSC-443, PAL-N, and PAL-M from the autoswitch process

I<sup>2</sup>C register address 0Dh = Outputs and data rates select register  
I<sup>2</sup>C data 40h = Enables 8-bit 4:2:2 YCbCr with discrete sync output

## 5 Application Information

### 5.1 Application Example

NOTE: The use of INTERQ/GPCL/AVID/HSYNC and VSYNC is optional. These are outputs and can be left floating.  
 When OSC is connected through S1, remove the capacitors for the crystal.  
 PDN needs to be high, if device has to be always operational.  
 RESETB is operational only when PDN is high. This allows an active low reset to the device.
